MATLAB for Civil Engineers Dimitrios Sargiotis, 2025-05-21 This book is a comprehensive and rigorous guide to MATLAB for Civil Engineers bridging the critical gap between theoretical mathematics and practical engineering solutions With an approachable introduction for students and deep insights for experienced professionals it caters to a wide range of audiences across civil engineering disciplines environmental structural geotechnical and transportation engineering Structured to guide readers progressively the book begins with foundational MATLAB operations such as syntax and matrix manipulation then advances into sophisticated engineering applications including optimization numerical methods and data visualization It covers essential MATLAB functionalities offering detailed instruction on computation visualization and programming all within the context of solving real world engineering challenges What sets this book apart is its hands on approach Readers are immersed in practical learning through real world case studies examples and step by step exercises designed to reinforce key concepts The text provides both academic and professional readers with the tools they need to model analyze and optimize engineering systems using MATLAB ensuring they are equipped to handle both routine and complex engineering challenges with confidence By the end readers will not only master MATLAB's powerful tools but will also understand how to apply them directly to critical civil engineering problems positioning themselves to innovate and lead in a field where computational proficiency is increasingly essential

Influence of flight control laws on structural sizing of commercial aircraft Rahmetalla Nazzeri, 2021-11-15 The increasing demand for new civil aircraft pushes aircraft manufacturers to develop innovative solutions that lead in particular to mass reductions One way to achieve these kinds of improvements is the use of multidisciplinary analysis and optimization In this sense the intention of this PhD thesis is to develop a multidisciplinary framework in order to quantify the impact of load alleviation function parameter changes on structural components like the wing and fuselage in terms of resulting mass changes The developed iterative process chain covers the loads calculation including an active load alleviation system a structural assessment of the wing and fuselage components and a dedicated feedback loop in order to update mass and stiffness properties of the loads calculation model The study shows that significant mass reductions are achievable while on the other hand estimated mass penalties are irrelevant
