**Pattern Classification** Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field. Now with the second edition readers will find information on key new topics such as neural networks and statistical pattern recognition, the theory of machine learning and the theory of invariances. Also included are worked examples, comparisons between different methods, extensive graphics, expanded exercises and computer project topics. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

*New Solutions for an Old Challenge* Ronny Merkel, 2014 In criminal investigations latent fingerprints are often considered as reliable means of identifying suspects. However, the evidential value of a print is strongly dependent on the knowledge of its age, the time which has passed since deposition. Suspects might admit their previous presence at a crime scene but often claim to have been there prior to or after the crime. Especially in regard to public or highly frequented crime scenes prints might lose their evidential value in this case, potentially leading to dropped charges. Despite its high relevance, the challenge of estimating a latent print's age could not be adequately addressed for 80 years. In this thesis, non-invasive high resolution capturing devices are for the first time applied to the age estimation challenge, replacing classical physical or chemical print development techniques. They allow to capture a single print in regular time intervals and to systematically study its degradation behavior. Introducing automated processing methods in the form of a digital pipeline including preprocessing, feature extraction and age estimation techniques, objective age estimates are presented for the first time in this field. Maximum classification performances of different capturing devices between 76% and 86% are achieved for two class problems. Furthermore, a qualitative influence model on the aging speed of latent prints is designed, forming a prerequisite for future studies.

**Biometric Solutions** David D. Zhang, 2012-12-06 Biometric Solutions for Authentication in an E World provides a collection of sixteen chapters containing tutorial articles and new material in a unified manner. This includes the basic concepts, theories and characteristic features of integrating and formulating different facets of biometric solutions for authentication with recent developments and significant applications in an E world. This book provides the reader with a basic concept of biometrics, an in-depth discussion exploring biometric technologies in various applications in an E world. It also includes a detailed description of typical biometric based security systems and up-to-date coverage of how these issues are developed. Experts from all over the world demonstrate the various ways this integration can be made to efficiently design methodologies, algorithms, architectures and implementations for biometric based applications in an E world.

**Bioinformatics and Computational Biology Solutions Using R and Bioconductor** Robert Gentleman, Vincent Carey, Wolfgang Huber, Rafael Irizarry, Sandrine Dudoit, 2005-12-29 Bioconductor is a widely used open source and open development software project for the analysis and comprehension of data arising from high throughput experimentation in genomics and molecular biology. Bioconductor is rooted in the open source statistical computing environment R. This volume is

coverage is broad and ranges across most of the key capabilities of the Bioconductor project including importation and preprocessing of high throughput data from microarray proteomic and flow cytometry platforms Curation and delivery of biological metadata for use in statistical modeling and interpretation Statistical analysis of high throughput data including machine learning and visualization Modeling and visualization of graphs and networks The developers of the software who are in many cases leading academic researchers jointly authored chapters All methods are illustrated with publicly available data and a major section of the book is devoted to exposition of fully worked case studies This book is more than a static collection of descriptive text figures and code examples that were run by the authors to produce the text it is a dynamic document Code underlying all of the computations that are shown is made available on a companion website and readers can reproduce every number figure and table on their own computers

John A. Richards, 2022-01-06 *Remote Sensing Digital Image Analysis* provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data. Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same. As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing. The presentation level is for the mathematical non-specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background. The chapters progress logically through means for the acquisition of remote sensing images, techniques by which they can be corrected and methods for their interpretation. The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter.
