*The Thermophysics of Porous Media* T.J.T. Spanos,2001-11-28 Models for the mechanical behavior of porous media introduced more than 50 years ago are still relied upon today but more recent work shows that in some cases they may violate the laws of thermodynamics In The Thermophysics of Porous Media the author shows that physical consistency requires a unique description of dynamic processes that involv

**Analysis of Communication Networks** David R. McDonald,Stephen Robert Edward Turner, This volume consists of the proceedings of the Workshop on Analysis and Simulation of Communication Networks held at The Fields Institute Toronto The workshop was divided into two main themes entitled Stability and Load Balancing of a Network of Call Centres and Traffic and Performance The call centre industry is large and fast growing In order to provide top notch customer service it needs good mathematical models The first part of the volume focuses on probabilistic issues involved in optimizing the performance of a call centre While this was the motivating application many of the papers are also applicable to more general distributed queueing networks The second part of the volume discusses the characterization of traffic streams and how to estimate their impact on the performance of a queueing system The performance of queues under worst case traffic flows or flows with long bursts is treated These studies are motivated by questions about buffer dimensioning and

Fillmore,James A. Mingo, The study of operator algebras which grew out of von Neumann's work in the 1920s and the 1930s on modelling quantum mechanics has in recent years experienced tremendous growth and vitality This growth has resulted in significant applications in other areas both within and outside mathematics The field was a natural candidate for a 1994 1995 program year in Operator Algebras and Applications held at The Fields Institute for Research in the Mathematical Sciences This volume contains a selection of papers that arose from the seminars and workshops of the program Topics covered include the classification of amenable C algebras the Baum Connes conjecture E subscript 0 semigroups subfactors E theory quasicrystals and the solution to a long standing problem in operator theory Can almost commuting self adjoint matrices be approximated by commuting self adjoint matrices     *Integration Algorithms and Classical Mechanics* Jerrold E.
