

MICROBIOLOGY

Microbiology (from Greek: μικρός, mikros, "small"; βίος, bios, "life"; and -λογία, -logia) is the study of microscopic organisms, either unicellular (single cell), multicellular (cell colony), or acellular (lacking cells). Microbiology encompasses numerous sub-disciplines including virology, mycology, parasitology, and bacteriology.

Eukaryotic microorganisms possess membrane-bound cell organelles and include fungi and protists, whereas prokaryotic organisms—which all are microorganisms—are conventionally classified as lacking membrane-bound organelles and include bacteria and archaeabacteria. Microbiologists traditionally relied on culture, staining, and microscopy. However, less than 1% of the microorganisms present in common environments can be cultured in isolation using current means. Microbiologists often rely on extraction or detection of nucleic acid, either DNA or RNA sequences.

Viruses have been variably classified as organisms, as they have been considered either as very simple microorganisms or very complex molecules. Prions, never considered microorganisms, have been investigated by virologists, however, as the clinical effects traced to them were originally presumed due to chronic viral infections, and virologists took search—discovering "infectious proteins".

As an application of microbiology, medical microbiology is often introduced with medical principles of immunology as microbiology and immunology. Otherwise, microbiology, virology, and immunology as basic sciences have greatly exceeded the medical variants, applied sciences.

Branches

The branches of microbiology can be classified into pure and applied sciences. Microbiology can be also classified based on taxonomy, in the cases of bacteriology, mycology, protozoology, and phycology. There is considerable overlap between the specific branches of microbiology with each other and with other disciplines, and certain aspects of these branches can extend beyond the traditional scope of microbiology.

Taxonomic arrangement

- **Bacteriology:** The study of bacteria.
- **Mycology:** The study of fungi.
- **Protozoology:** The study of protozoa.
- **Phycology (or algology):** The study of algae.
- **Parasitology:** The study of parasites.
- **Immunology:** The study of the immune system.
- **Virology:** The study of viruses.
- **Nematology:** The study of the nematodes.
- **Microbiology:** The study of microbes.

Integrative arrangement

- **Microbial cytology:** The study of microscopic and submicroscopic details of microorganisms.
- **Microbial physiology:** The study of how the microbial cell functions biochemically. Includes the study of microbial growth, microbial metabolism and microbial cell structure.
- **Microbial ecology:** The relationship between microorganisms and their environment.
- **Microbial genetics:** The study of how genes are organized and regulated in microbes in relation to their cellular functions. Closely related to the field of molecular biology.
- **Cellular microbiology:** A discipline bridging microbiology and cell biology.
- **Evolutionary microbiology:** The study of the evolution of microbes. This field can be subdivided into:
 - **Microbial taxonomy:** The naming and classification of microorganisms.
 - **Microbial systematics:** The study of the diversity and genetic relationship of microorganisms.
- **Generational microbiology:** The study of those microorganisms that have the same characters as their parents.
- **Systems microbiology:** A discipline bridging systems biology and microbiology.
