Teaching Today's Mathematics in the Middle Grades Art Johnson, Kit Norris, 2006 Teaching Today's Mathematics in the Middle Grades provides current and future middle school teachers with the mathematics content essential concepts methodology activities and resources to both learn and teach mathematics in grades 5 to 8 The authors focus exclusively on the middle school learner and the middle school mathematics curriculum Although each chapter discusses foundational mathematics concepts from earlier grades and previews topics that will follow the middle grades the emphasis is on the middle school This selective focus allows for proper development of critical topics in the middle school such as proportionality algebraic thinking and the integral role of manipulatives Assessment practices and problem solving are also emphasized from the viewpoint of effective practices for middle school students Unique Features React and Reflect features prompt classroom discussions by asking the reader to think independently regarding a statement issue or concern Try This features ask the reader to solve a problem first or extend the current discussion by working on an

extension of a problem By completing the problem first teachers are putting themselves in the place of their students helping the teacher discover first hand common misconceptions Numerous exercises and activities appear at the end of each chapter to reinforce student understanding of various topics and ensure mastery of the mathematics content The NCTM Principles and Standards are emphasized throughout the book beginning with a discussion in Chapter 1 Each of the content chapters 6 11 opens with the relevant NCTM content standards for that chapter In addition marginal icons highlight areas within the text in which the NCTM process standards are discussed Reviewers rave From the content organization and approach it is evident that the authors have years of teaching experience This gives the text authority Marina Krause California State University Long Beach The authors do an excellent job of presenting in sequential order essential concepts methodology activities and technological resources essential to assist the beginning math teacher in preparing to teach in the middle school program Gerald Jarmon North Carolina Central University

O'Daffer, 1988 **Mathematics Assessment** Gerald Kulm, 1994-10-28 This book provides math teachers and those who work with them with a comprehensive and practical resource for planning and implementing alternative assessment in the classroom Drawing from his own experience working with teachers at several grade levels in a variety of settings Gerald Kulm offers hands on guidelines for assessing student understanding of procedures concepts and problem solving including advice on developing and interpreting assessment tasks assessing individual and group mathematical activities using scoring rubrics developing student portfolios and more Kulm provides specific tips and ideas for getting started and simple ways to adapt math activities and problems for assessment He includes numerous examples of student products such as puzzles projects problems interviews and group activities that can allow for individual differences in learning and productivity Kulm also offers a section of frank teacher written summaries that provide firsthand insights into what worked and what did not The range of types of classes and assessment goals described in these summaries make it easy for nearly any teacher to find a situation similar to that of their own class and adapt the strategies that were successful Alternative Assessment in Mathematics Stephen Michael O'Donnell, 1995 **Making Problems, Creating Solutions** Jill Ostrow, 1999 In Making Problems Creating Solutions Jill Ostrow rethinks the teaching of mathematics and shows teachers how to build challenging learning environments in elementary classrooms She introduces the notion of workshop learning in mathematics and demonstrates ways in which teachers can readily integrate math into all curricular areas Traditional mathematics instruction consists of statements of rules followed by examples which define those rules the tell show and do model Under this model math concepts are fed to students in a sequence determined by the teacher rather than the intellectual readiness of the child Alternatively Jill takes a process approach to mathematics acquisition that is based upon understanding challenge independence confidence and choice Such an approach makes it easier for kids to apply their knowledge to new problems and to other areas of their lives Making Problems Creating Solutions gives educators a chance to see the NCTM Standards as well as many other mathematics curricula put into authentic practice provides examples of solutions and thinking strategies of students ages 6 to 12 describes a new and innovative approach to teaching calendar contains a large section on assessment features an extensive appendix of problems with each problem annotated to show which standard is being addressed This book shows teachers how to encourage kids to create problem solving strategies and then to share and

discuss those strategies with peers It is an appropriate text for both preservice and inservice programs as well as math inservice workshops In *Making Problems Creating Solutions* Jill places meaning and purpose at the heart of her mathematics program and in turn gives teachers ideas and techniques that will inspire critical thinking in young mathematicians
