Pathways for Getting to Better Water Quality: The Citizen Effect Lois Wright Morton, Susan S. Brown, 2010-11-25

This book is about accomplishing change in how land is managed in agricultural watersheds. Wide ranging case studies repeatedly document that plans, policies and regulations are not adequate substitutes for the empowerment of people. Ultimately change on the land is managed and accomplished by the people that live on land within each watershed.

Sustainable Intensification to Advance Food Security and Enhance Climate Resilience in Africa Rattan Lal, Bal Ram Singh, Dismas L. Mwaseba, David Kraybill, David O. Hansen, Lars Olav Eik, 2014-10-10. This 32 chapter volume represents the core of several oral and poster presentations made at the conference. In addition to Introduction and Conclusion sections, the book is thematically divided into 7 sections: 1 Land Use and Farming Systems, 2 Effects of Climate Change on Crop Yield, 3 Soil Nutrient and Water Management for Carbon Sequestration, 4 Rehabilitation of Degraded Lands through Forestry and Agroforestry, 5 Management of Animal Production for Greenhouse Gas Emissions, 6 Smallholder Adaptation to Climate Change, and 7 Economic, Social and Policy Issues. It addresses these themes in the context of sustainable intensification (SI). It implies increasing agronomic production from the existing land while improving, restoring its quality and decreasing the C or environmental footprint. Simply put, SI means producing more from less. **Journal of Soil and Water Conservation**, 2014 Vol 25 no 1 contains the society's Lincoln Chapter's Resource conservation glossary. *Principles of Sustainable Soil Management in Agroecosystems* Rattan Lal, B.A. Stewart, 2013-06-10. With the use of high level soil management technology, Africa could feed several billion people, yet food production has generally stagnated since the 1960s. No matter how powerful the seed technology, the seedling emerging from it can flourish only in a healthy soil. Accordingly, crop yields in Africa, South Asia and the Caribbean could be doubled or tripled through adoption of technologies based on laws of sustainable soil management. *Principles of Sustainable Soil Management in Agroecosystems* describes the application of these laws to enhance ecosystem services while restoring degraded soils and promoting sustainable use. With chapters contributed by world class soil scientists, ecologists and social scientists, this book outlines critical changes in management of agricultural soils necessary to achieve food security and meet the food demands of the present and projected future population. These changes include conversion to no till and conservation agriculture, adoption of strategies of integrated nutrient management, water harvesting and use of drip sub irrigation, complex cropping, farming systems such as cover cropping and agroforestry, and use of nano enhanced fertilizers. The book is based on the premise that it is not possible to extract more from a soil than what is put into it without degrading its quality. The strategy is to replace what is removed, respond wisely to what is changed, and be pro active to what may happen because of natural and anthropogenic perturbations. The chapters which exemplify these ideas cover a range of topics including organic farming, soil fertility, crop symbiotic soil microbiota, human driven soil degradation, soil degradation and restoration, carbon sink capacity of soils, soil renewal and sustainability, and the marginality
