Problems Alan Jessop, 2016-03-17 Managers need access to some statistical advice from time to time to help in solving business problems Students need access to statistical methods to support work in non statistics courses case studies and projects What is needed will depend on the demands of the problem and how much statistics the manager or student already knows The requirement is for flexible decision support This unique book presents statistical ideas and models in easily accessible form describing both methods and issues of application statsNotes are organized as a set of over one hundred notes rather than as a number of chapters This enables managers and students to locate just what they need for the problem they have Each note consists of a description of what to do an example the rationale links to other notes Managers and students can choose to use as many notes as necessary which might be just one note or a set of linked notes Deciding which method will be helpful depends not just on finding an appropriate statistical method but on the business context too statsNotes provide advice at three levels While the range of topics covered is similar to those in introductory textbooks and courses the focus is on management decision and the methods for dealing with risky decisions and management judgment in this book are usually found in more specialist texts **Coordination Models and Languages** Wolfgang De

Meuter, Gruia-Catalin Roman, 2011-06-07 This book constitutes the refereed proceedings of the 13th International Conference on Coordination Models and Languages COORDINATION 2011 held in Reykjavik Iceland in June 2011 as one of the DisCoTec 2011 events The 14 revised full papers presented were carefully reviewed and selected from 35 submissions The conference focuses on the design and implementation of models that allow compositional construction of large scale concurrent and distributed systems including both practical and foundational models run time systems and related verification and analysis

This book/CD-ROM package helps you to reduce the cost of framework development by providing 40 case studies documenting the experiences of framework builders and users at major corporations and research labs worldwide. Throughout, the authors extract important lessons and highlight technical and organizational implementation practices that have been proven to yield the biggest payoff. Focusing primarily on business systems and agent-based application frameworks, it covers frameworks for Data processing, Agent-based applications, Artificial intelligence applications, Object-oriented business processes, System application frameworks, Programming languages and tools. And much more. Pattern-oriented Software Architecture Douglas C. Schmidt, Frank Buschmann, 1996 This fourth volume in the POSA series explores the concepts underlying patterns.
