Machine Learning and Deep Learning Techniques for Medical Image Recognition Ben Othman Soufiene,Chinmay Chakraborty,2023-12-01 Machine Learning and Deep Learning Techniques for Medical Image Recognition comprehensively reviews deep learning based algorithms in medical image analysis problems including medical image processing It includes a detailed review of deep learning approaches for semantic object detection and segmentation in medical image computing and large scale radiology database mining A particular focus is placed on the application of convolutional neural networks with the theory and varied selection of techniques for semantic segmentation using deep learning principles in medical imaging supported by practical examples Features Offers important key aspects in the development and implementation of machine learning and deep learning approaches toward developing prediction tools and models and improving medical diagnosis Teaches how machine learning and deep learning algorithms are applied to a broad range of application areas including chest X ray breast computer aided detection lung and chest microscopy and pathology Covers common research problems in medical image analysis and their challenges Focuses on aspects of deep learning and machine learning for combating COVID 19 Includes pertinent case studies This book is aimed at researchers and graduate students in computer engineering artificial intelligence and machine learning and biomedical imaging

Remote Sensing Digital Image Analysis John A. Richards,2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background The chapters progress logically through means for the acquisition of remote sensing images techniques by which they can be corrected and methods for their interpretation The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter

Pattern

Recognition and Machine Learning Christopher M. Bishop,2016-08-23 This is the first textbook on pattern recognition to present the Bayesian viewpoint The book presents approximate inference algorithms that permit fast approximate answers in situations where exact answers are not feasible It uses graphical models to describe probability distributions when no other books apply graphical models to machine learning No previous knowledge of pattern recognition or machine learning concepts is assumed Familiarity with multivariate calculus and basic linear algebra is required and some experience in the use of probabilities would be helpful though not essential as the book includes a self contained introduction to basic probability theory
