Stefan Werning,2021-02-16 An argument that production tools shape the aesthetics and political economy of games as an expressive medium In Making Games Stefan Werning considers the role of tools primarily but not exclusively software their design affordances and the role they play as sociotechnical actors Drawing on a wide variety of case studies Werning argues that production tools shape the aesthetics and political economy of games as an expressive medium He frames game making as a meta game in itself and shows that tools like games have their own procedural rhetoric and should not always be conceived simply in terms of optimization and best practices **The Future of Governance** Roger Brownsword,2024-08-02

This book offers a radically different introduction to law one that reflects the challenges and opportunities presented by the rapid technological developments of our time Traditionally law has been about historic principles and rules and their application to a particular set of facts and courts judges and disputes have been central to the legal enterprise Against this approach this book highlights four radical and revisionist ideas by bringing modern technologies into the foreground by presenting law as one particular mode of governance in a larger picture of governance that now includes technological modalities by insisting that we have to think outside the traditional doctrinal box to engage with a broad range of governance questions and by emphasising that human communities cannot flourish without good governance to which both lawyers and law are central These four radical threads are woven into a discussion of the modern landscape of law and together they offer a distinctly contemporary contribution to the quest for good governance The challenge for lawyers now the book maintains is to contribute to thinking both locally and globally about how we take advantage of the opportunities presented by the newest technology without compromising the essential conditions for human life and co existence and without losing what we value in law s governance This book is aimed at students who are studying law at university and legal academics and others interested in the current and future impact of technology on law Artificial Intelligence Thomas Bernold,Günter

Journal of Perinatal Medicine ,1989 **Artificial Intelligence in Price Management. A Qualitative Assessment of Potentials, Risks and Impacts** Lennard Heyder,2024-12-05 Master s Thesis from the year 2024 in the subject Business economics Information

Management grade 1 0 Otto Beisheim School of Management Vallendar Chair of Strategy and Marketing course Price Management language English abstract This thesis explores the transformative role of Artificial Intelligence AI in price management focusing on its impact across the four key phases strategy analysis decision making and implementation as defined by Simon and Fassnacht The motivation for this research arises from a gap in existing literature no conceptual

framework currently addresses AI's specific impacts on each phase of the price management process. The primary aim is to assess AI's influence including opportunities, risks, and structural changes within each phase. Two research questions guide this study: What phase-specific value propositions and risk factors will AI introduce in each of the four price management phases? How can these impacts be synthesized into a comprehensive decision-making framework? To address these questions, a narrative literature review of recent studies (2022-2024) was conducted, culminating in a structured framework. This framework provides a cross-industry overview of AI applications in pricing, equipping organizations with a practical tool to evaluate their pricing strategies and make informed decisions about AI integration. The framework presents a varied value-risk profile across phases, helping organizations identify where AI can best support pricing and where risks, such as algorithmic bias and transparency issues, require oversight. A phased approach to AI adoption is recommended, beginning with phases where AI supports human judgment to limit risk. Higher levels of automation and decision authority can be introduced later to maximize efficiency and value, provided there is a balanced approach to risk, technological maturity, and alignment with organizational goals.
