Metrics Based Process Mapping An Excel Based Solution:

Metrics-Based Process Mapping Karen Martin, Mike Osterling, 2008-08-07 Metrics Based Process Mapping MBPM is a methodology that was developed to support the adoption of lean practices in office service and technical environments. Designed and developed by lean practitioners this technique integrates the functional orientation of conventional swim lane process maps with the time and quality metrics used in value stream mapping. While MBPM can be used to help improve any cross functional process it is an especially effective means for understanding and acting on office service and technical process improvement opportunities identified during value stream mapping. View a presentation of this valuable tool in action <http://vimeo.com/27016122>. This CD provides improvement teams with an Excel based solution to electronically archive and distribute current and future state MBPMs created with paper and Post it notes. This flexible user friendly tool includes A custom toolbar that enables mapping related functionality including the ability to insert reorder or remove steps and functions. Automated calculation of key process performance metrics. An audit tool that ensures a map contains the data required to auto calculate the metrics needed to compare process performance from the current to the projected future state. Easy to use with no installation necessary the tool requires only basic Excel experience. It includes a detailed step by step instruction guide that walks users through the process of creating a metrics based process map. System Requirements: The tool is intended for use on PC's using Excel 2003 or later it will NOT function with earlier versions of Excel or on Macintosh computers.

Building on the success of its popular predecessor Metrics Based Process Mapping An Excel Based Solution this book takes readers to the next level in understanding processes and process improvement. Included with the book is an interactive macro driven Excel tool which allows users to electronically capture their current and future state maps. The tool also audits the maps for completeness summarizes the metrics and auto calculates the improvements. Improvements to this version include Foundational content about processes what they are and how they vary. A description of the difference between value stream and process level maps. New content about how to bridge the gap between your current state and your desired future state. Tips for effective team formation and mapping facilitation. An implementation plan for those using the mapping methodology as a standalone tool and not part of a Kaizen Event. The Excel based tool included on the accompanying CD provides readers with a user friendly way to electronically archive manually created maps in team settings for easier storage and distribution across your entire organization. While current and future state MBPMs are initially created during team based activities using butcher paper and post its the electronic maps
