Out Time Consequences Non Standard Springerbriefs:

Out of Time Kadri Täht, Melinda Mills, 2015-12-14 This pioneering work aims at understanding the impact of non standard evening night weekend working time on family cohesion meaning parent child interaction partnership quality and divorce or partnership dissolution Out of time the Consequences of Non standard Employment Schedules for Family Cohesion is the first work to treat this important topic in a cross national comparative way by using data from two large comparable surveys The impact of work in non standard schedules on workers can be divided into individual and social consequences Research so far has shown the clear individual effects of these schedules such as increased stress levels and sleeping and physical disorders There is less clarity about social consequences Either no or positive effects of these types of schedules on workers and their families are found or a significant negative impact on the relations between the workers and others especially other members of the family is shown in research results This Brief compares the Netherlands and the United States of America countries that both show a high prevalence of non standard schedule work whereas both operate in very different institutional and welfare regime settings of working time regulation By combining both quantitative and qualitative data the authors are able to provide generalized views of comparative surveys and challenging those generalizations at the same time thus enabling the reader to get a better understanding and more balanced view of the actual relationship between non standard employment schedules and family cohesion *The Economics and Policies of Environmental Standards* Elissaios Papyrakis, Luca Tasciotti, 2021-03-29 This book provides a critical perspective on several interconnected themes that relate to the implementation of both domestic and international environmental standards What are the direct and indirect costs and benefits of these standards What is the political economy structure that governs their implementation Do environmental standards affect individuals and economic sectors in different ways How do environmental standards interact with trade patterns in an ever globalised world Understanding the multidimensional effects of environmental standards is crucial for the establishment of effective environmental and development policies The book presents our current state of knowledge for the issues presented while also drawing policy insights from a WTO project on phytosanitary standards the authors undertook in four Sub Sahara African countries Botswana Cameroon Kenya and Mozambique *Laser Polarimetry of Biological Tissues* Zhengbin Hu, I.L. Bezhenar, O.Y. Vanchulyak, A. G. Ushenko, Yu. A. Ushenko, Mykhailo P. Gorsky, Igor Meglinski, 2023-06-16 This book highlights the results of numerical computer aided smart methods as part of a comprehensive statistical correlated and fractal analysis of laser polarimetry It includes a comprehensive approach to differentiation of lifelong or postmortem origin of injuries and determination of their antiquity based on the analysis of statistical and spatiotemporal frequency evolution of photometric polarization and phase parameters of laser images of histological sections of the skin of biomannequins It discusses the relationship between the coordinate distributions of the intensity of laser images from skin tissues of biomannequins and the nature of its damage It presents the

analysis of relationships between changes in the mean and variance of coordinate distributions of azimuths and ellipticity of polarization images of histological skin sections and the time intervals after injury Complex differentiation of lifelong and postmortem skin injuries of biomannequins and establishment of their time intervals throughout the entire monitoring interval of changes in the mean and variance of coordinate distributions of phase shifts between orthogonal components of the amplitude of laser images of a series of corresponding histological sections are also presented in this book

Solving Non-standard Packing Problems by Global Optimization and Heuristics Giorgio Fasano, 2014-04-21 This book results from a long term research effort aimed at tackling complex non standard packing issues which arise in space engineering The main research objective is to optimize cargo loading and arrangement in compliance with a set of stringent rules Complicated geometrical aspects are also taken into account in addition to balancing conditions based on attitude control specifications Chapter 1 introduces the class of non standard packing problems studied Chapter 2 gives a detailed explanation of a general model for the orthogonal packing of tetris like items in a convex domain A number of additional conditions are looked at in depth including the prefixed orientation of subsets of items the presence of unusable holes separation planes and structural elements relative distance bounds as well as static and dynamic balancing requirements The relative feasibility sub problem which is a special case that does not have an optimization criterion is discussed in Chapter 3 This setting can be exploited by introducing an ad hoc objective function aimed at facilitating the finding of integer feasible solutions The third chapter also discusses the issue of tightening the general MIP model by introducing valid inequalities A MIP based heuristic approach is developed in Chapter 4 where the basic concept of abstract configuration is presented Chapter 5 is devoted to experimental results relevant to a real world application framework Chapter 6 adopts both extensions of the general MIP model and non linear formulations to tackle two further non standard packing issues The final Chapter 7 presents conclusions and provides insights regarding prospective developments including non standard scheduling aspects Practitioners and researchers interested in advanced optimization model development and solution in the context of logistics transportation systems complex structures manufacturing and electronics will find this book useful The book can also be used in graduate courses on nonlinear including global and mixed integer optimization as a valuable collection of practically meaningful object packing applications
