Guidebook for Systems Applications in Astrobiology Vera M. Kolb, 2023-12-20. This book addresses the timely subject of systems applications in astrobiology. It demonstrates how astrobiology, a multidisciplinary, interdisciplinary, and transdisciplinary field of science, can benefit from adopting the systems approach. Astrobiology draws upon its founding sciences such as astronomy, physics, chemistry, biochemistry, geology, and planetary sciences. However, astrobiologists can encounter difficulties working across these fields. The systems approach, we believe, is the best contemporary approach to consider astrobiology holistically. The approach is currently used in other fields such as engineering, which uses systems analysis routinely. Such an approach needs to be learned both in principle and through examples from the field. This book features chapters from experts across the field of astrobiology who have applied the systems approach. It will be a valuable guide for astrobiology students at the advanced undergraduate and graduate levels, in addition to researchers in the field, both in academia and the space industry.

Key Features: Offers a unique and novel approach to studying and understanding astrobiology. Encourages astrobiologists to apply a holistic systems approach to their work rather than being bogged down in details. Imparts practical knowledge to readers, which can be adopted in different research and job opportunities in the field of astrobiology.

Microbial Biotechnology Rajesh Arora, 2012. This book focuses on two key issues confronting humanity: viz. energy and environment. There is a need to devise strategies for protecting the environment at the same time adequately meeting the ever-growing energy needs of the world. Harnessing the power of microbes is one step towards finding cheap, green, and sustainable solutions to the problems of energy and environment. The book is divided into eight major topics. These topics include emerging trends in microbial biotechnology, harnessing sustainable energy sources from microorganisms, mechanistics of bioenergy production, bioenergy from wastes and pollutant removal, microalgae for biofuels, bioremediation technologies for petroleum hydrocarbons, polycyclic aromatic hydrocarbons, and xenobiotics, bioremediation of nuclear wastes, and the role of extremophilic microorganisms in environmental cleanup.
