

## Newton's second law

- Content** This lesson introduces Newton's second law:  $F = ma$ . Students apply Newton's second law to calculate forces from motion, and motion from forces. The lesson includes an investigation where students explore the proportionality between the net force and acceleration. The investigation goal is to strengthen understanding of how the magnitude of net force acting on an object affects the object's acceleration, and how the mathematical expression for Newton's second law is derived.
- Learning objectives** The student will be able to:
- 1) explain the action of a net force on motion using the concept of acceleration;
  - 2) calculate acceleration in units of  $\text{m/s}^2$  when given mass and force; and
  - 3) use a net force versus acceleration graph to understand the mathematical model for Newton's second law.
- Materials/technology resources**
- 1) Slide presentation: "NewtonSecondLaw.pptx"
  - 2) Interactive calculator: "Newton's second law"
  - 3) Investigation: Smart cart with hook, 250-g cart masses (2), dynamic track, track floor (2), support pulley with clamp, thread, hanging variable mass
  - 4) SPARKvue file: "SPV\_Newton'sSecondLaw.spvfile"
  - 5) Student work: "NewtonSecondLawAssignment.pdf"
- Lesson plan arguments**
- **Whole-group discussion:** Ask the students what they think is probably the most widely used of all physics equations. They may suggest  $E = mc^2$ , but Newton's second law—today's topic—is far more commonly used.
  - **Slide presentation:** The presentation begins by introducing Newton's second law and discussing its meaning: the acceleration of an object depends upon the net force on the object and its mass. Students use an interactive calculator to solve basic problems. Formal problem solutions are presented for two situations. First, the motion of an object is predicted by knowing the net force on it, and second, the net force on an object is calculated from its known motion. Students then move on to the investigation described below.
  - **Investigation:** Students measure the net force on, and acceleration of a cart given five different net forces applied to it. Students plot a graph of their net force versus acceleration data and observe the proportional relationship between the variables. The investigation allows students to directly observe the effect of force on acceleration, and demonstrated that the proportionality constant between the two is equal to the mass of the object.
  - **Student work:** Newton's second law assignment  
The assignment sheet provides a place for students to record the results of their investigation. They should complete this with their lab partners.
  - **Reading:** from the Essential Physics textbook, pages 143 - 146

force of 10 N acts upon a cart on a straight track. Label each row, possibly true, or false. (Use slide presentation)

g object is subject to a net force of 25 N. What is the speed in  $\text{m/s}^2$ ? (Use slide presentation)

$$a = \frac{F}{m} = \frac{25 \text{ N}}{10 \text{ kg}} = 2.5 \text{ m/s}^2$$

now, how long will it be before its velocity is 25  $\text{m/s}$ ?

$$v = at \text{ and } v_0 = 0 \text{ m/s, rearranging: } t = \frac{v}{a} = \frac{25 \text{ m/s}}{2.5 \text{ m/s}^2} = 10 \text{ s}$$

is a graph showing a car's net force and acceleration data as the car accelerates. If the car drives in a straight line, what is the slope of the line? (Use presentation)

the slope of the line is equal to mass  $m = (200 \text{ N})/(2.0 \text{ m/s}^2) = 100 \text{ kg}$ .

relation with one-dimensional kinematics (displacement, velocity) and Newton's first law.
