**Chatgpt and Other Generative AI Tools** Jochen Kuhn, Stefan Küchemann, Knut Neumann, Martina Rau, 2025-02-17 In the past ten years applications of generative artificial intelligence GAI have found rapidly growing use in medicine science and daily life Large language models LLMs opened up new avenues in particular for education LLMs have been used to create interactive educational content for students stimulate their curiosity generate code explanations and develop assessment questions Additionally LLMs been applied for language practice anxiety alleviation and feedback provision In higher education LLMs have shown potential for assisting in medical exam preparation and clinical decision making In school education LLMs can help teachers with automated evaluation of student responses and respective adaptive feedback More recently LLM based applications such as chatGPT have been used to generate teaching materials or assessment tasks across different subjects The fields understanding of the effects of the use of LLM based applications in classroom teaching however is still in its infancy GAI tools may help solving a range of tasks in education in particular with respect to teachers and students and teachers efforts to generate content However it is critical that teachers and students do not overly rely on GAI generated solutions but instead critically assess each solution Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies **Artificial Intelligence**

**in Animal Behaviour, Veterinary Behaviour and Neurology** Holger Andreas Volk, Jasmin Nicole Nessler, Anna Zamansky, Sebastian Meller, Annika Bremhorst, 2025-08-18 The new leap innovation Artificial Intelligence AI will significantly accelerate the speed of science and translate into clinical practice faster than clinicians ever have been used to Machine and deep learning techniques are now readily available to analyze large and complex data sets providing veterinary scientists with a tool to not only better understand complex behaviour traits and neurological conditions but also to delve into the nuances of animal behaviour itself AI can now write plausible sounding text recognize written or spoken human words recognize objects in images or analyze large amounts of data Different fields of applications are known so far such as improving and speeding up interpretation of radiologic findings interpretation of electroencephalography diagnosis of autism in children objectifying ataxia in dogs detecting pain in cats and assessing and characterizing animal behaviours across species At the time of writing more than 500 AI based algorithms have been approved by the FDA for human medicine most of which are used in radiology and neurology In veterinary neurology and animal behavioural science only a limited amount of research on AI has been done so far Most algorithms presented are merely fragments of usable programs and are not suitable for clinical application Therefore ready to use applications are rare yet essential for implementing AI into everyday routine diagnostic work ups scientific research and animal behavioural assessments The research topic will help to unite current efforts and provide a collection of articles to address some of the current scientific and behavioural gaps In the future a clinician might have a clinical decision support tool that generates accurate estimations of likely outcomes of

neurological disease and animal behaviour combining anamnestic behavioural clinical pathology and imaging information We are interested in original research systematic reviews and opinion papers not only about the scope and potential of AI for Veterinary Behavior and Neurology but also about the intersection of AI with the study of animal behaviour ethical considerations and pitfalls that the development of AI generated tools could present Potential themes therefore include but are not limited to AI to recognize monitor diagnose or characterise behaviour neurological deficits or conditions including a detailed analysis of animal behaviour across a variety of contexts and species AI to assess behavioural states in both clinical and natural environments AI to interpret scientific clinical data sets such as clinical pathology omics imaging EEG data and behaviour metrics Ethical and legal considerations when applying or using AI tools in the study of animal behaviour and veterinary medicine Potential of AI to enhance clinical practice in veterinary behavioural medicine veterinary neurology and animal behaviour research Potential of AI enhanced diagnostic and behavioural assessment tools with animals

*Generative AI in Education* Ilaria Torre, Diego Zapata-Rivera, Chien-Sing Lee, Antonio Sarasa-Cabezuelo, Ioana Ghergulescu, Paul Libbrecht, 2024-12-24 In the field of education there is a growing interest in the use of Generative Artificial Intelligence to reshape the educational landscape Led by our esteemed Associate Editors Dr Zapata Rivera Prof Torre and Review Editors Profs Lee Sarasa Cabezuelo Libbrecht Dr Ghergulescu this editorial initiative aims to investigate the transformative potential of Generative AI in various aspects of education By leveraging machine learning models these intelligent systems extract useful insights from vast amounts of data making them capable of delivering highly individualized content They can analyze a learner's proficiency level learning style and pace and then tailor the study material accordingly Whether a learner prefers visual aids textual content or interactive modules Generative AI can adapt its content generation strategies to meet distinct preferences and learners needs This ensures an elevated engagement level and enhanced comprehension highlighting its potential to transform traditional teaching methodologies **Impact of Technology on**

**Human Behaviors in Medical Professions Education** Muhammad Azeem Ashraf, Jinbo He, Samson Maekele Tsegay, 2025-02-20 Human behaviors are essential in understanding how individuals engage in medical science academic activities Healthcare systems across the globe have witnessed a significant shift in recent years by integrating technology in innovating new methods and practices to improve educational practices Therefore pedagogical practices in medical sciences are expected to be consistent with the current developments so that medical students are prepared with the necessary skills when entering workplaces In addition the excessive use of technology has created severe concerns in the academic community that needs further investigation Thus it is crucial to know how teachers and students in medical sciences engage themselves in challenging behaviors particularly in academic activities This Research Topic aims to call for papers examining the influence of technology on human behavior in medical education We invite researchers practitioners teachers and students in all medical science disciplines to submit their research papers encompassing Quantitative studies Qualitative

studies Empirical Case studies Mixed Method studies Experimental Research and Review studies This Research Topic welcomes articles about but not only limited to the following topics 1 impact of technology on human behavior in medical professions teaching 2 impact of technology on human behavior in medical professions training and learning 3 effect of different social and psychological factors on healthy unhealthy use of technology in medical sciences     **Artificial Intelligence in Pathogenic Microorganism Research** Chen Li,Yu-Dong Yao,Marcin Grzegorzek,2025-05-26 Infections caused by pathogenic microorganisms including bacteria viruses fungi and other eukaryotic microbes seriously threaten human health Traditional research methods and laboratory techniques have many limitations and focus more on the identification and classification of pathogenic microorganisms In recent years technologies such as whole genome sequencing and advanced bioinformatics analysis have promoted the research of pathogenic microorganisms However with the interplay of multiple factors like global climate change ecological and environmental changes urbanization social behavior and lifestyle changes pathogenic microorganisms transmission patterns and impact scope are gradually changing There is an urgent need for multidimensional technological approaches to achieve epidemiological monitoring and evolutionary direction prediction of pathogenic microorganisms Additionally more robust data processing and analysis capabilities are required for rapid identification and diagnosis monitoring of drug resistance development of antimicrobial drugs and vaccines and optimization of treatment plans Therefore Artificial Intelligence AI has entered our field of vision In the field of pathogenic microorganisms AI has shown tremendous potential In epidemiological research AI technology can quickly and automatically collect integrate and analyze the epidemic data of infectious diseases from different regions so as to predict the trend and scope of disease transmission and track the source of infection In the process of diagnosis and treatment of infectious diseases machine learning can not only analyze the microscopic images of pathogens but also analyze the genome sequences of multiple pathogens in a short time and predict their sensitivity or resistance to specific antibiotics greatly improving the efficiency and accuracy of diagnosis and treatment of infectious diseases In drug or vaccine development researchers can use AI models to predict efficient antigens for diseases such as HIV and influenza and thus design more effective vaccine candidates AI models can also analyze the interactions between drugs pathogens and patients in order to design the optimal dosing regimen for each patient In a word AI can help human beings better deal with infectious diseases We welcome original reviews articles and other contributions in related fields which mainly include the following aspects 1 The application of AI in the differential diagnosis of pathogenic microorganisms 2 The application of AI in the formulation of anti infection treatment plans 3 The application of AI in monitoring and predicting the prevalence of pathogenic microorganisms 4 Application of AI in the prediction and prevention of infectious diseases caused by pathogenic microorganisms 5 The application of AI in the research and development of anti infective drugs and vaccines     **Along the Path to Recovery: Supporting Student Learning Motivation, Engagement and Development in Post-Pandemic**

**Higher Education** Genshu Lu, Mei Tian, Hongbiao Yin, Boliang Guo, 2025-12-12 The COVID 19 pandemic has caused unprecedented disruptions in educational systems on a global scale. It is estimated that the learning trajectories of approximately 1.5 billion students have been adversely affected, with the most vulnerable segments of the student population having suffered the most. Currently three years post outbreak, educational institutions have reopened worldwide; however, higher education is still in recovery, grappling with the long-term impact of the prolonged closures. Managing the aftermath of the pandemic calls for the implementation of innovative teaching and learning practices. Such practices should be informed by an in-depth and critical reflection on the lessons that we have learned during this crisis, aimed at supporting and reinforcing students' learning and development. In an era marked by uncertainty and constant changes, it is crucial that our higher education sector remains resilient and adaptable, ensuring that students are equipped to learn, develop, and thrive in the future world. Recent decades have seen a significant increase in research investigating learning motivation and engagement within higher education, establishing these topics as central themes in academic inquiry. Learning motivation refers to individuals' willingness, inclination, and enthusiasm to invest time, energy, and effort in academic endeavors, facilitating learning success and achievement. Student engagement refers to the time and effort students devote to activities that are empirically linked to desired outcomes of college. Researchers have explored characteristics and determinants of learning motivation and engagement across various learning environments involving diverse student cohorts, differentiated by gender, academic disciplines, educational levels, and cultural backgrounds. Additionally, research has illuminated the influences of motivation and engagement on learning achievement, as evidenced by improved academic performance gains in general abilities and intellectual development. Building upon the insights gained from the above-mentioned conceptual and empirical literature, the current Research Topic seeks to explore the features of and associations among students' learning motivation, engagement, and development within the post-pandemic higher education contexts. This collection intends to bring together researchers, scholars, and higher education policy makers to share insights, methodologies, and practices that highlight the importance of supporting student motivation, engagement, and development as cornerstones for the recovery of higher education. The dialogue facilitated by this collection aspires to contribute to the sustainable development of higher education in the post-COVID era. We invite original empirical research and theoretical articles on a range of topics which include but are not limited to the following areas: Measurement of students' learning motivation, engagement, and development; Features and influential factors of students' learning motivation, engagement, and development; Relationship between students' learning motivation, engagement, and development; Teaching pedagogies, assessment innovations, and curriculum designs that enhance learning motivation, engagement, and development; Learning motivation, engagement, and development among vulnerable student groups, including international students, linguistic and ethnic minorities, and students with disabilities; Learning motivation, engagement, and development in various learning environments, such as traditional classrooms, online.

courses and informal learning spaces Uses of technologies digital tools and artificial intelligence in promoting learning motivation engagement and development Other perspectives approaches and practices for understanding students emotions psychology and behaviors which can be used to provide interventions that support learning and development
