Fuzzy Systems and Soft Computing in Nuclear Engineering Da Ruan, 2013-11-21 Fuzzy systems and soft computing are new computing techniques that are tolerant to imprecision uncertainty and partial truths Applications of these techniques in nuclear engineering present a tremendous challenge due to its strict nuclear safety regulation The fields of nuclear engineering fuzzy systems and soft computing have nevertheless matured considerably during the last decade This book presents new application potentials for Fuzzy Systems and Soft Computing in Nuclear Engineering The root of this book can be traced back to the series of the first second and third international workshops on Fuzzy Logic and Intelligent Technologies in Nuclear Science FUNS which were successfully held in Mol September 14 16 1994 FLINS 94 in Mol September 25 27 1996 FLINS 96 and in Antwerp September 14 16 1998 FLINS 98 The conferences were organised by the Belgian Nuclear Research Centre SCKeCEN and aimed at bringing together scientists researchers and engineers from academia and industry at introducing the principles of fuzzy logic neural networks genetic algorithms and other soft computing methodologies to the field of nuclear engineering and at applying these techniques to complex problem solving within nuclear industry and related research fields This book as its title suggests consists of nuclear engineering applications of fuzzy systems Chapters 1 10 and soft computing Chapters 11 21 Nine pertinent chapters are based on the extended version of papers at FLINS 98 and the other 12 chapters are original contributions with up to date coverage of fuzzy and soft computing applications by leading researchers written exclusively for this book

Modelling Dynamics in

Processes and Systems Wojciech Mitkowski, 2009-06-01 Dynamics is what characterizes virtually all phenomena we face in the real world and processes that proceed in practically all kinds of inanimate and animate systems notably social systems For our purposes dynamics is viewed as time evolution of some characteristic features of the phenomena or processes under consideration It is obvious that in virtually all non trivial problems dynamics can not be neglected and should be taken into account in the analyses to first get insight into the problem consider and second to be able to obtain meaningful results A convenient tool to deal with dynamics and its related evolution over time is to use the concept of a dynamic system which for the purposes of this volume can be characterized by the input control state and output spaces and a state transition equation Then starting from an initial state we can find a sequence of consecutive states outputs under consecutive inputs controls That is we obtain a trajectory The state transition equation may be given in various forms exemplified by differential and difference equations linear or nonlinear deterministic or stochastic or even fuzzy imprecisely specified fully or partially known etc These features can give rise to various problems the analysts may encounter like numerical difficulties instability strange forms of behavior e g chaotic etc This volume is concerned with some modern tools and techniques which can be useful for the modeling of dynamics We focus our attention on two important areas which play a key role nowadays namely automation and robotics and biological systems We also add some new applications which can greatly benefit from the availability of effective and efficient tools for modeling dynamics exemplified by some applications in security systems

Applications and Science of Neural Networks, Fuzzy Systems, and Evolutionary Computation II Bruno Bosacchi, David B. Fogel, James C. Bezdek, 1999 **Applications and Science of Neural Networks, Fuzzy Systems, and Evolutionary Computation**, 1999 **Proceedings of the Third World Conference on Structural Control** Fabio Casciati, 2003-03-14 Organized by the International Association for Structural Control IASC and sponsored by the European Association for the Control of Structures EACS the recent world conference on structural control 3WCSC brought together engineers scientists architects builders and other practitioners interested in the general fields of active hybrid and passive vibration control health monitoring and damage detection intelligent smart materials and systems Applications included buildings bridges space structures and civil infrastructures under the action of dynamic environments earthquake wind traffic and man made loads It

provided a valuable forum for the discussion of the most pressing concerns in structural control and its related topics. The conference covered a wide range of topics including active and semi active control devices, passive control devices, control algorithms for linear and non linear systems, modeling and identification of structural systems, sensors, health monitoring and damage detection, benchmark test of building and bridges, innovative materials for structural control applications to aerospace structures, applications to bridges, applications to critical structures, external dynamic force characteristics and controllability issues, implications of severe ground motions, wind forces, codes for structural control and so forth. Such comprehensive treatment of the most innovative developments in structural control will make these volumes an informative reference for all researchers and engineers interested in this area.

Proceedings of the US Europe Workshop On Sensors and Smart Structures Technology Como and Somma Lombardo Italy. In the last few years significant progress has been made in the area of sensing technology and structural health monitoring condition assessment in the US and Europe. Innovative concepts involving new hardware, algorithms and software have been proposed. There have also been several full scale trial implementations of densely sensor instrumented infrastructures and health monitoring systems as well as case studies on bridges in Europe and in the US. Much can be learnt through US European collaboration in the area of experimental verification on small, medium, large and full scale projects. Moreover a common framework for expanded future joint research can be developed on the increased understanding achieved through mutual learning. This workshop consisted of seminar sessions on several themes which included innovative sensing, hardware advances in wireless technology and damage detection, characterization and condition assessment methodologies. In addition there were several workshop sessions devoted to summarizing the status of the sensors and smart structures technologies in these topics, identifying the compelling research issues and formulating an action plan with recommendations for development and implementation through possible collaborative research projects and sharing of scientific data.

[Data Science and Big Data: An Environment of Computational Intelligence](#) Witold Pedrycz, Shyi-Ming Chen, 2017-03-21. This book presents a comprehensive and up to date treatise of a range of methodological and algorithmic issues. It also discusses implementations and case studies, identifies the best design practices and assesses data analytics business models and practices in industry, health care, administration and business. Data science

and big data go hand in hand and constitute a rapidly growing area of research and have attracted the attention of industry and business alike. The area itself has opened up promising new directions of fundamental and applied research and has led to interesting applications especially those addressing the immediate need to deal with large repositories of data and building tangible user centric models of relationships in data. Data is the lifeblood of today's knowledge driven economy. Numerous data science models are oriented towards end users and along with the regular requirements for accuracy which are present in any modeling come the requirements for ability to process huge and varying data sets as well as robustness interpretability and simplicity transparency. Computational intelligence with its underlying methodologies and tools helps address data analytics needs. The book is of interest to those researchers and practitioners involved in data science Internet engineering computational intelligence management operations research and knowledge based systems. *Proceedings of the US-Europe Workshop on Sensors and Smart Structures Technology* Lucia Faravelli, Billie Floyd Spencer, 2003

Fuzzy sets were introduced by Zadeh 1965 as a means of representing and manipulating data that was not precise but rather fuzzy. Fuzzy logic provides an inference morphology that enables approximate human reasoning capabilities to be applied to knowledge based systems. The theory of fuzzy logic provides a mathematical strength to capture the uncertainties associated with human cognitive processes such as thinking and reasoning. The conventional approaches to knowledge representation lack the means for representing the meaning of fuzzy concepts. As a consequence the approaches based on first order logic and classical probability theory do not provide an appropriate conceptual framework for dealing with the representation of commonsense knowledge since such knowledge is by its nature both lexically imprecise and noncategorical. The development of fuzzy logic was motivated in large measure by the need for a conceptual framework which can address the issue of uncertainty and lexical imprecision. Some of the essential characteristics of fuzzy logic relate to the following. 242 In fuzzy logic exact reasoning is viewed as a limiting case of approximate reasoning. In fuzzy logic everything is a matter of degree. In fuzzy logic knowledge is interpreted a collection of elastic or equivalently fuzzy constraint on a collection of variables. Inference is viewed as a process of propagation of elastic constraints. Any logical system can be fuzzified. There are two main characteristics of fuzzy systems that give them better performance for specific applications. **Fuzzy Logic, Soft Computing and Computational Intelligence**, 2005
