User's Manual R. J. Marhefka,W. D. Burnside,OHIO STATE UNIV COLUMBUS ELECTROSCIENCE LAB.,1979 The
Numerical Electromagnetic Code Basic Scattering Code is a user oriented computed code for the analysis of the far field
patterns of antennas in the presence of perfectly conducting metal structures at UHF and above The analysis is based on
uniform asymptotic techniques formulated in terms of the Geometrical Theory of Diffraction GTD Complicated structures can
be simulated by arbitrarily oriented flat plates an infinite ground plane and a finite elliptic cylinder A wide range of practical
problems can be simulated using these shapes For example flat plates can be used to model the superstructure of a ship the
body of a truck or the wings and stores of an aircraft The finite elliptic cylinder can be used to model a mast or smoke stack
of a ship or the fuselage and engines of an aircraft This document is designed to give an overall view of the operation of the
computer code to instruct a user in how to model structures and to show the validity of the code by comparing various
computed results against measured data whenever available It also describes in detail the input and output data for the code
This information should be sufficient for most user s to learn how to effectively operate the code Author **Conversational**
