Sun,Kun-Zhi Liu,Xue-Fang Wang,Andrew R. Teel,2023-03-16 This book considers the problems of network based control and optimization As is known network based control has great advantages over traditional control systems because it may lead to easy installation and maintenance low cost and so on Sometimes network based control is also necessary in many situations For example multi agents may need to communicate with each other under wireless scenarios On the other hand the network may lead to some imperfect factors such as samplings delays transmission protocols and packet losses These factors may degrade the system performance and even lead to the instability of the control systems This book aims at providing a modeling framework and analysis approach for the general nonlinear networked control systems based on the hybrid framework The proposed results deal with very general nonlinear systems and help the readers understand the principle of nonlinear network based control and optimization

*Autonomic Network Management Principles* Nazim

Agoulmene,2010-12-03 Autonomic networking aims to solve the mounting problems created by increasingly complex networks by enabling devices and service providers to decide preferably without human intervention what to do at any given moment and ultimately to create self managing networks that can interface with each other adapting their behavior to provide the best service to the end user in all situations This book gives both an understanding and an assessment of the principles methods and architectures in autonomous network management as well as lessons learned from the ongoing initiatives in the field It includes contributions from industry groups at Orange Labs Motorola Ericsson the ANA EU Project and leading universities These groups all provide chapters examining the international research projects to which they are contributing such as the EU Autonomic Network Architecture Project and Ambient Networks EU Project reviewing current developments and demonstrating how autonomic management principles are used to define new architectures models protocols and mechanisms for future network equipment Provides reviews of cutting edge approaches to the management of complex telecommunications sensors etc networks based on new autonomic approaches This enables engineers to use new autonomic techniques to solve complex distributed problems that are not possible or easy to solve with existing techniques Discussion of FOCALe a semantically rich network architecture for coordinating the behavior of heterogeneous and distributed computing resources This provides vital information since the data model holds much of the power in an autonomic system giving the theory behind the practice which will enable engineers to create their own solutions to network management problems Real case studies from the groups in industry and academia who work with this technology These allow engineers to see how autonomic networking is implemented in a variety of scenarios giving them a solid grounding in applications and helping them generate their own solutions to real world problems
