Microbial Protein Toxins Topics In Current Genetics:

Microbial Protein Toxins Manfred Schmitt, Raffael Schaffrath, 2004-12-10 Since the initial establishment of Robert Koch's postulates in the nineteenth century microbial protein toxins have been recognized as a major factor of bacterial and fungal virulence. An increasing number of proteins produced and secreted by various bacteria, yeasts, and plants are extremely toxic and most of them developed remarkably intelligent strategies to enter, to penetrate, and to finally kill a eukaryotic target cell by modifying or blocking essential cellular components. This book describes the strategies employed by protein toxins to render their pro and eukaryotic producers a selective growth advantage over competitors. In providing an up-to-date overview on the mode of protein toxin actions, it accommodates biomedically and biologically relevant toxin model systems. As a result, it significantly broadens our perspective on biochemical architecture and molecular play behind the lethal principles of pro and eukaryotic toxins.

Corynebacterium diphtheriae and Related Toxigenic Species Andreas Burkovski, 2013-10-29 *Corynebacterium diphtheriae* is the classical etiological agent of diphtheria and the type strain of the genus *Corynebacterium*. While diphtheria of the respiratory tract became rare with the introduction of vaccination programs in industrialized countries, even today several thousand cases per year are reported to the World Health Organization. This shows that diphtheria is not completely eradicated and that reservoirs exist. The book summarizes the latest advances made in understanding *C. diphtheriae* and the closely related species *Corynebacterium ulcerans* and *Corynebacterium pseudotuberculosis*. Topics addressed are genomics of toxigenic corynebacteria, host-pathogen interaction, detection, surveillance, and treatment, as well as application aspects.

Brewing and Distilling Yeasts Graham G. Stewart, 2018-01-04 This book is an overview considering yeast and fermentation. The similarities and differences between yeasts employed in brewing and distilling are reviewed. The implications of the differences during the production of beer and distilled products, potable and industrial, are discussed. This Handbook includes a review of relevant historical developments and achievements in this field, the basic yeast taxonomy and biology, as well as fundamental and practical aspects of yeast cropping, flocculation, handling, storage, and propagation. Yeast stress, vitality, and viability are also addressed together with flavor production, genetic manipulation, bioethanol formation, and

ethanol production by non *Saccharomyces* yeasts and a Gram negative bacterium This information and a detailed account of yeast research and its implications to both the brewing and distilling processes is a useful resource to those engaged in fermentation yeast and their many products and processes

The Comprehensive Sourcebook of Bacterial Protein Toxins Joseph E. Alouf, Daniel Ladant, Michel R. Popoff, 2005-12-20 This book describes the major achievements and discoveries relevant to bacterial protein toxins since the turn of the new century illustrated by the discovery of more than fifty novel toxins many of them identified through genome screening The establishment of the three dimensional crystal structure of more than 20 toxins during the same period offers deeper knowledge of structure activity relationships and provides a framework to understand how toxins recognize receptors penetrate membranes and interact with and modify intracellular substrates Edited by two of the most highly regarded experts in the field from the Institut Pasteur France 14 brand new chapters dedicated to coverage of historical and general aspects of toxinology Includes the major toxins of both basic and clinical interest are described in depth Details applied aspects of toxins such as therapy vaccinology and toolkits in cell biology Evolutionary and functional aspects of bacterial toxins evaluated and summarized Toxin applications in cell biology presented Therapy cancer therapy dystonias discussed Vaccines native and genetically engineered vaccines featured Toxins discussed as biological weapons comprising chapters on anthrax diphtheria ricin etc
