

## database introduction: MySQL Manual

The MySQL database package consists of the following:

**The MySQL server:** This is the heart of MySQL. You can consider it a program that stores and manages your databases.

**MySQL client programs:** MySQL comes with many client programs. The one with which we'll be dealing a lot is called `mysql` (note: smallcaps). This provides an interface through which you can issue SQL statements and have the results displayed.

**MySQL client Library:** This can help you in writing client programs in C. (We won't be taking about this in our tutorial).

### Creating MySQL database on Windows system

1. Invoke the `mysql` client program by typing `mysql` at the prompt.
2. The prompt is changed to a `mysql>` prompt. Type:

```
create database employees;
```

(Note: The command ends with a semi-colon).

3. The MySQL server responds with something like:  
Query OK, 1 row affected (0.00 sec)
4. This means that you have successfully created the database. Now, let's see how many databases you have on your system. Issue the following command.

```
show databases;
```

The server responds with the list of databases.

```

+-----+
| Database |
+-----+
| employees |
| mysql     |
| test      |
+-----+
```

```
3 rows in set (0.00 sec)
```

Here we have three databases, two created by MySQL during installation and our `employees` database.

5. To come back to the DOS prompt, type `quit` at the `mysql` prompt.
