Esplorando il cervello. Con CD-ROM* Mark F. Bear, Barry W. Connors, Michael A. Paradiso, 2007 Biochemistry for Anesthesiologists and Intensivists Fernando Alemanno, 2019-10-22 This book discusses and explains the importance of biochemistry knowledge in understanding what happens to patients during anesthesia and or to those being in intensive care It covers a wide range of topics such as Cerebral Edema Shock Blood Brain Barrier The Pulmonary surfactant The Acid Base equilibrium Local anaesthetics Perineural adjuvants Normobaric Oxygen Therapy Theories of Narcosis Hyperventilation effects and consequences are also presented For instance by hyperventilating a patient with a PaCO₂ significantly below 25 mmHg we risk blocking pyruvic acid carboxylation and transforming it into oxalacetic acid which in turn knocks out the Krebs cycle possibly leading to a complication i.e. to metabolic acidosis and not to compensation for respiratory alkalosis It is also worth remembering that vitamins are actually molecules of pretty considerable potency and should not be simply intended as integrators If we inject a patient under intensive care with vitamin C this not only plays a capillary protective role but facilitates the conversion of dopamine to noradrenaline As far as vitamin B6 goes not only is it the most natural of antiemetics but the coenzyme responsible for transforming glutamate as one of the most powerful excitatory mediators into GABA one of the fiercest inhibitors Anesthesiological and intensive care practice require a detailed biochemistry knowledge to avoid onset of complications and or to deal with unexpected events promptly and appropriately The book is intended for anesthesiologists intensivists anesthesia teachers anesthesia trainees and residents *Il cambiamento psicoterapeutico* Carlo Cristini, 2012
