Physics and Chemistry of the Solar System John Lewis, 2012-12-02 Physics and Chemistry of the Solar System focuses on planetary physics and chemistry. This book consists of 12 chapters. Chapters I to IV cover the general properties and environment of the planetary system. The solar system beyond Mars is elaborated in Chapters V to VIII while the inner solar system is considered in Chapters XI to XII. In these chapters this compilation specifically discusses the limitations on big bang nucleosynthesis, structure and classification of galaxies and mass and angular momentum distribution. The radio wave propagation in space plasmas, interiors of Jupiter and Saturn, density and composition of icy satellites and evaporation and non gravitational forces are also deliberated. This text also explains the physical properties of meteorites, geology of the Moon, geophysical data on Mars and search for extraterrestrial intelligence. This publication is a good reference for first year graduate students who intend to take graduate courses in specialized areas of planetary sciences as well as practicing Ph D scientists with training in physics, chemistry, geology, astronomy, meteorology and biology.

Science and Technology Policy in Interdependent Economies David C. Mowery, 2012-12-06 Economic policy debates have devoted increasing attention to the design and implementation of policies to aid the growth of high technology firms and industries. In the United States this focus on technology policy has been influenced by similar debates and policy experiments in other industrial economies notably Japan and Western Europe. The domestic U.S. debate over support for technology development and national competitiveness has been hampered by two major conceptual flaws: the demand for immediate economic results from basic research and considering national technology policies independent of developments in the international economy. This volume addresses these deficiencies in the analysis of technology policy by examining a number of issues faced by managers and public officials in industrial and industrializing economies that are now linked closely through international flows of goods, capital and technology. The book lays out an analytical framework for the study of national policies towards technology and science. In addition the book addresses the complex issues raised by interdependence among the public and private institutions governing the creation, commercialization and adoption of new technology in different national economies. Finally the book reviews the development of two global high technology industries: aerospace and semiconductor components.

Long before Galileo published his discoveries about Jupiter's lunar craters and the Milky Way in the *Starry Messenger* in 1610 people were fascinated with the planets and stars around them. That interest continues today and scientists are making new discoveries at an astounding rate. Ancient lake beds on Mars, robotic spacecraft missions and new definitions of planets now dominate the news. How can you take it all in? Start with the new *Encyclopedia of the Solar System* Second Edition. This self-contained reference follows the trail blazed by the bestselling first edition. It provides a framework for understanding the origin and evolution of the solar system, historical discoveries and details about planetary bodies and how they interact and has jumped light years ahead in terms of new information and visual impact. Offering more than 50% new material, the *Encyclopedia* includes the latest explorations and observations, hundreds of new color digital images and illustrations and more than 1 000 pages. It stands alone as the definitive work in this field and will serve as a modern messenger of scientific discovery and provide a look into the future of our solar system. Forty seven chapters from 75 eminent authors review fundamental topics as well as new models, theories and discussions. Each entry is detailed and scientifically rigorous yet accessible to undergraduate students and amateur astronomers. More than 700 full color digital images and diagrams from current space missions and observatories amplify the chapters. Thematic chapters provide up to date coverage including a discussion on the new International Astronomical Union (IAU) vote on the definition of a planet. Information is easily accessible with numerous cross references and a full glossary and index.
