**Algorithmic Marketing and EU Law on Unfair Commercial Practices** Federico Galli, 2022-08-30 Artificial Intelligence AI systems are increasingly being deployed by marketing entities in connection with consumers interactions Thanks to machine learning ML and cognitive computing technologies businesses can now analyse vast amounts of data on consumers generate new knowledge use it to optimize certain processes and undertake tasks that were previously impossible Against this background this book analyses new algorithmic commercial practices discusses their challenges for consumers and measures such developments against the current EU legislative framework on consumer protection The book adopts an interdisciplinary approach building on empirical findings from AI applications in marketing and theoretical insights from marketing studies and combining them with normative analysis of privacy and consumer protection in the EU The content is divided into three parts The first part analyses the phenomenon of algorithmic marketing practices and reviews the main AI and AI related technologies used in marketing e g Big data ML and NLP The second part describes new commercial practices including the massive monitoring and profiling of consumers the personalization of advertising and offers the exploitation of psychological and emotional insights and the use of human like interfaces to trigger emotional responses The third part provides a comprehensive analysis of current EU consumer protection laws and policies in the field of commercial practices It focuses on two main legal concepts their shortcomings and potential refinements vulnerability understood as the conceptual benchmark for protecting consumers from unfair algorithmic practices manipulation the substantive legal measure for drawing the line between fair and unfair practices *Information Technology Security and Risk Management* Stephen C. Wingreen, Amelia Samandari, 2024-05-16 *Information Technology Security and Risk Management Inductive Cases for Information Security* is a compilation of cases that examine recent developments and issues that are relevant to IT security managers risk assessment and management and the broader topic of IT security in the 21st century As the title indicates the cases are written and analyzed inductively which is to say that the authors allowed the cases to speak for themselves and lead where they would rather than approach the cases with presuppositions or assumptions regarding what the case should be about In other words the authors were given broad discretion to interpret a case in the most interesting and relevant manner possible any given case may be about many things depending on the perspective adopted by the reader and many different lessons may be learned The inductive approach of these cases reflects the design philosophy of the advanced IT Security and Risk Management course we teach on the topic here at the University of Canterbury where all discussions begin with the analysis of a specific case of interest and follow the most interesting and salient aspects of the case in evidence In our course the presentation analysis and discussion of a case are followed by a brief lecture to address the conceptual theoretical and scholarly dimensions arising from the case The inductive approach to teaching and learning also comes with a huge advantage the students seem to love it and often express their appreciation for a fresh and engaging

approach to learning the sometimes highly technical content of an IT security course As instructors we are also grateful for the break in the typical scripted chalk and talk of a university lecture afforded by the spontaneity of the inductive approach We were motivated to prepare this text because there seems to be no other book of cases dedicated to the topic of IT security and risk management and because of our own success and satisfaction with inductive teaching and learning We believe this book would be useful either for an inductive case based course like our own or as a body of cases to be discussed in a more traditional course with a deductive approach There are abstracts and keywords for each case which would help instructors select cases for discussions on specific topics and PowerPoint slides are available as a guide for discussion about a given case

*Data Law* Thomas Hoeren, Stefan Pinelli, 2025-06-16 European Data Law offers a comprehensive exploration of EU data regulations including horizontal and sector specific acts as the Data Act and the GDPR This work bridges legal theory and practice providing structured insights into the governance of data in the digital age
