### **The Role of Gut Microbes and Their Metabolites in Immune-related Diseases, volume II** Chuanxing

Xiao,Xiangtian Yu,Qinglong Wu,Zhe-Sheng Chen,Wei Xu,2025-10-08 Given the success of Research Topic The Role of Gut Microbes and Their Metabolites in Immune related Diseases and the rapidly evolving subject area we are pleased to announce the launch of Volume II The digestive tracts of a healthy adult contain approximately about 10<sup>11</sup> 10<sup>12</sup> microorganisms including bacteria and archaea collectively referred to as the gut microbiota or intestinal flora An individual s gut microbial flora is unique acting as a separate set of genomes in the body Recent studies have confirmed that altered intestinal flora and their metabolites significantly affect a variety of biological behaviors including metabolism organ development and immune response which are significantly associated with human diseases including but not limited to gastrointestinal disorders obesity diabetes cancer and even neurological and neurodegenerative diseases such as depression autism anxiety and Parkinson s disease It is now well recognized that gut microbiota and their metabolites can affect the body s immune system in various ways thereby regulating the progression of multiple diseases including but not limited to inflammatory bowel disease cancers and diabetes For example intestinal flora regulates the immune system by influencing the tryptophan metabolic pathway Bacterial components are presented directly as antigens and activate the immune system Intercommunication between bacteria and host cells induces the secretion of inflammation associated cytokines thus recruiting immune cells and regulating immune homeostasis Given the important role of the interaction between the immune system and the gastrointestinal microbiota in human disease It is worth exploring the mechanism of their interaction and elucidating the relationship between the gut microbiome immunity and human diseases which would be significant to identify potential therapeutic strategies and targets for related diseases We encourage the exploration of the etiology of human immune related diseases from the perspective of gut microecology to address these challenging questions Both original studies and review articles with the following contents are highly anticipated for publication Molecular mechanisms of interaction between gut microbes metabolites and immune system Effect of gut microbes metabolites on the immune system and immune related diseases New therapies and targets based on the interaction between gut microbes metabolites and the immune system for related diseases

### **Advanced Fermentation and Cell Technology, 2 Volume Set** Byong H.

Lee,2021-10-25 ADVANCED FERMENTATION AND CELL TECHNOLOGY A comprehensive and up to date reference covering both conventional and novel industrial fermentation technologies and their applications Fermentation and cell culture technologies encompass more than the conventional microbial and enzyme systems used in the agri food biochemical bioenergy and pharmaceutical industries New technologies such as genetic engineering systems biology protein engineering and mammalian cell and plant cell systems are expanding rapidly as is the demand for sustainable production of bioingredients drugs bioenergy and biomaterials As the growing biobased economy drives innovation industrial practitioners

instructors researchers and students must keep pace with the development and application of novel fermentation processes and a variety of cell technologies Advanced Fermentation and Cell Technology provides a balanced and comprehensive overview of the microbial mammalian and plant cell technologies used by the modern biochemical process industry to develop new and improved processes and products This authoritative volume covers the essential features of advanced fermentation and cell technology and highlights the interaction of food fermentation and cell culture biopharmaceutical actives Detailed chapters organized into five sections cover microbial cell technology animal and plant cell technology safety issues of new biotechnologies and applications of microbial fermentation to food products chemicals and pharmaceuticals Written by an internationally recognized expert in food biotechnology this comprehensive volume Covers both conventional and novel industrial fermentation technologies and their applications in a range of industries Discusses current progress in novel fermentation cell culture commercial recombinant bioproducts technologies Includes overviews of the global market size of bioproducts and the fundamentals of cell technology Highlights the importance of sustainability Good Manufacturing Practices GMP quality assurance and regulatory practices Explores microbial cell technology and culture tools and techniques such as genome shuffling and recombinant DNA technology RNA interference and CRISPR technology molecular thermodynamics protein engineering proteomics and bioinformatics and synthetic biology Advanced Fermentation and Cell Technology is an ideal resource for students of food science biotechnology microbiology agricultural sciences biochemical engineering and biochemistry and is a valuable reference for food scientists researchers and technologists throughout the food industry particularly the dairy bakery and fermented beverage sectors

*Bovine Colostrum as a Nutraceutical* Rahul Mehra,Raquel P.F. Guiné,Harpal S. Buttar,Shiv Kumar,2026-01-23 Bovine colostrum is being touted by medical professionals nutritionists and food product developers worldwide for its ability to optimize health and help manage disease Scientists are becoming increasingly intrigued by its nutrient dense immune boosting properties *Bovine Colostrum as a Nutraceutical Developments in Processes and Products for Therapeutic and Dietary Applications* takes a closer look at every facet of a cow's first milk from composition to consumption and discusses how its nutritional and hyper immune properties are frequently used in food pharma worldwide Comprised of 18 chapters *Bovine Colostrum as a Nutraceutical Developments in Processes and Products for Therapeutic and Dietary Applications* elucidates the chemistry physiological effects and response of nutritional bioactive elements such as peptides while exploring the impact of different environmental natural and processing factors that can affect colostrum's composition Authors discuss emerging colostrum processing methods as well as the recent technologies and instrumentation used for isolating and identifying bioactive components for food product development Readers will also learn colostrum's role in gut immune and skin health and how it can enhance muscle growth for improved athletic performance Safety efficacy and regulatory considerations of bovine colostrum and its derivatives are also discussed Explores the global trend of bovine colostrum as a functional food and a nutraceutical Presents recent developments in both

the processing methods and the diverse range of products derived from bovine colostrum Highlights the use of bovine colostrum for age related medical conditions Analyzes bovine colostrum in athletic performance enhancement and muscle recovery Discusses the safety efficacy and regulatory considerations of bovine colostrum and its derivatives **Medicinal Plants in Parkinson's Therapy** Sachchida Nand Rai, Payal Singh, Falguni Goel, 2025-11-17 Medicinal Plants in Parkinson's Therapy presents a thorough exploration on how traditional herbal remedies and modern scientific research come together in managing Parkinson's disease. The book provides valuable information on a range of medicinal plants and natural compounds focusing on their role in reducing symptoms such as tremors, rigidity, and slowness of movement. Readers are guided through sourcing quality herbs, preparing them safely, and determining suitable dosages. With a strong emphasis on integrating herbal treatments under professional medical supervision, the book encourages a holistic approach that complements conventional medical therapies. Beyond herbal interventions, the book discusses dietary changes, lifestyle adjustments, and mind-body practices like meditation and acupuncture as part of a comprehensive care plan. It highlights the neuroprotective and antioxidant properties of key plants including *Mucuna pruriens*, *Withania somnifera*, *Tinospora cordifolia*, *Centella asiatica*, and *Bacopa monnieri*. Offers a holistic perspective on managing Parkinson's disease by combining insights from traditional herbal medicine with contemporary research findings. Provides guidance on sourcing high-quality herbs, appropriate preparation methods, and dosage instructions. Explores complementary approaches such as dietary adjustments, lifestyle modifications, and mind-body practices like meditation and acupuncture.

**Novel Strategies for Caries Control** Keke Zhang, Yaping Gou, Xuelian Huang, 2026-01-16 Dental plaque biofilm is usually defined as communities of dental surface or interface attached oral microbes that wrapped in matrix. It serves as an initial factor of a sequence of oral diseases including dental caries a chronic infectious disease that poses significant public health concerns. As one kind of diseases that seriously jeopardized health dental caries is not only an oral problem but also associated with systemic disease. Based on caries ecology hypothesis the imbalance in oral biofilm triggers caries development making biofilm control a key to caries control. Though we have conducted plenty of research and mass clinical practice for caries control by targeting oral biofilms current status of this disease is discouraging. In addition to protective biofilm matrix factors such as slow oral microbial growth stress responses activation and persisted cell microbial resistance also contribute to the recalcitrance of biofilms. For example chlorhexidine a kind of classical antimicrobial agent used in clinical practice can result in resistance in oral bacteria. Similar concerns apply to quaternary ammonium salt which can modify dental filling materials forming lone term non-releasing anti-microbial dental materials. Thus current strategies for caries management are still insufficient. In the Post Antibiotic Era there is an urgent need for development of novel strategies including novel antibacterial agents or molecules dental materials potential targets and technologies for caries control by targeting oral biofilms. The aim of this Research Topic is to assemble original research articles and reviews that address novel strategies for caries control. Specific aspects of interest include novel antibacterial

agents or molecules that inhibit biofilm formation promote biofilm dispersal or control biofilm ecology Additionally we seek research on new controlled release or non releasing anti biofilm dental filling materials for secondary caries prevention Other areas of focus include identifying novel potential targets within biofilms such as the biofilm matrix microbial elements or genes and employing innovative anti biofilm technologies that differ from classical methods for caries control We welcome submissions on the subtopics below Novel antibacterial agents or molecules for caries control by targeting biofilms Novel anti biofilm dental materials for caries control Novel potential targets within biofilms for caries control Novel anti biofilm technologies for caries control *Toxicology Abstracts* ,1993 Includes annual author and subject indexes Advanced Fermentation and Cell Technology Byong H.
