

## ChatGPT

ChatGPT works by using GPT models which are neural networks that can understand and generate human-like language.

- Generating text in natural language.
- Versatility in language tasks.
- Multilingual capabilities.
- Contextual relevance.

- Excessive dependence on data.
- Requirement of additional data to understand complex topics.
- Possibilities of biases in training data.

Better ease of use with dialogue-based interactions.

ChatGPT has claimed that its responses can be inaccurate and users must verify them.

## Google Search Engine

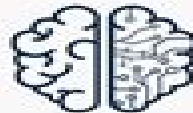

Google Search uses search algorithms and web crawlers for searching, indexing and classifying web pages according to different parameters.

- Advanced search capabilities.
- Trusted source for secure and dependable information.
- Access to different services such as Drive and Maps.

- Lack of contextual understanding.
- Limitations in scope for generating responses on different topics.
- Possibilities of irrelevant or wrong information in certain cases.

Users have to browse through different pages shown in the search results to find answers to their queries.

Google uses complex algorithms to ensure that users get the accurate results for their queries.
