Dishongh, Michael McGrath, Ben Kuris, 2010 This unique reference focuses on methods of application validation and testing based on real deployments of sensor networks in the clinical and home environments. Key topics include healthcare and wireless sensors sensor network applications designs of experiments using sensors data collection and decision making clinical deployment of wireless sensor networks contextual awareness medication prompting field trials in homes social health monitoring and the future of wireless sensor networks in healthcare

Medical Terminology & Anatomy for Coding - E-Book Betsy J. Shiland, 2024-06-19 Master the terminology you need to succeed in ICD 10 and CPT coding. Using small learning segments or chunks Medical Terminology Anatomy for Coding 5th Edition makes it easy to learn anatomy physiology and medical terminology. Concepts and terms are introduced and then immediately followed by exercises that reinforce and assess your understanding of the material. In addition the book discusses word parts and the rules for building medical terms building knowledge that may be applied to coding for all body systems and procedures. Written by respected educator Betsy Shiland this book includes an Evolve website with medical animations labeling activities quizzes and exams flashcards and more. NEW Updated content provides the latest on ICD 10 terminology and categorization. NEW Summary list of CPT 4 and HCPCS codes at the beginning of each chapter introduces the appearance of different coding systems with chapter appropriate examples. NEW Context Matters boxes help you avoid potentially embarrassing and costly coding errors by pointing out word parts terms and abbreviations that are spelled the same but have completely different meanings. NEW CDI Alert boxes offer a preview of how the Clinical Documentation Improvement process is related to specific medical terminology in a given body system. NEW Expanded information on subcellular structures explains how gene editing may be used to treat congenital diseases. UNIQUE Combination of A P coverage with the latest medical terminology provides everything you need to know to code in ICD 10 CM ICD 10 PCS and CPT. More than 400 illustrations bring medical terminology to life with anatomic pathologic and procedural images. Pathology terms are organized by ICD 10 disease and disorder categories allowing you to learn terms in the same order they are presented in the coding manual. Body Part Key provides a complete list of body parts and how they should be coded in ICD 10. Sample electronic medical records present terminology as you will encounter it on the job. Summary tables show procedural suffixes and their corresponding ICD 10 root operations. Practical appendices cover topics such as pharmacology oncology and infectious disease providing the basic information coders need to be able to understand these ICD 10 subjects and to code them correctly. Evolve website provides practice and review with medical animations labeling activities quizzes and exams flashcards and the Body Spectrum electronic coloring book

Strategies for Mitigating Zoonotic Influenza Outbreaks: A Comprehensive Preparedness Approach Sneha Vishwanath, Hazel Stewart, Sankaran Sandhya, 2025-10-13 Zoonotic influenza particularly avian influenza has become a pressing concern in recent years due to its

increasing incidence and potential to cause pandemics. The virus's ability to jump directly from birds to humans without an intermediate host has raised alarms as humans generally lack immunity to these strains. This situation is exacerbated by the genetic diversity and rapid mutation rate of influenza viruses which complicates efforts to predict and control outbreaks. Contributing factors such as global agricultural practices increased human-animal interactions spillovers into other mammals and environmental changes further heighten the risk of future influenza pandemics. Despite ongoing research significant gaps remain in our understanding of these viruses and how best to prepare for potential pandemics. Current studies have made strides in understanding virus transmission dynamics and developing vaccines and therapeutics but a comprehensive approach is still needed to address these challenges effectively.

Bispecific Antibodies and their Conjugates in Solid Tumors and Hematological Malignancies

Mirosława Puskulluoglu, Renata Pacholczak-Madej, 2026-01-07

Bispecific antibodies (BsAbs) are a major advancement in therapeutic oncology and hematology, capable of simultaneously engaging two distinct targets. This dual specificity enables precise immune modulation, enhanced tumor targeting, and the potential to overcome challenges such as tumor heterogeneity, immune evasion, and resistance to existing therapies. Over the past decade, BsAb formats such as T cell engagers and dual affinity retargeting molecules have shown promise in treating both hematological malignancies and solid tumors. The development of bispecific antibody drug conjugates (bispecific ADCs) has further expanded their therapeutic potential, combining dual targeting precision with the delivery of cytotoxic payloads to improve efficacy while minimizing toxicity. These advancements rely on multidisciplinary efforts in molecular engineering, immunology, and clinical research. However, challenges including immunogenicity, off-target effects, and manufacturing complexities persist, requiring ongoing innovation and evaluation. The goal of this Research Topic is to advance the understanding and application of BsAbs and bispecific ADCs in oncology and hematology by addressing the critical challenges that limit their full clinical potential. Despite significant progress in the development of BsAbs and bispecific ADCs, challenges such as tumor heterogeneity, resistance mechanisms, limited tumor penetration, and the immunosuppressive tumor microenvironment continue to impede their widespread use. Furthermore, issues related to immunogenicity, pharmacokinetics, and manufacturing complexities pose significant hurdles to scalability and clinical translation. This Research Topic seeks to provide a platform for a multidisciplinary approach to these challenges by fostering collaboration between structural biologists, immunologists, chemical biologists, and clinical researchers. By examining recent innovations in molecular engineering, dual targeting mechanisms, and combination strategies with other therapies, this collection aims to uncover solutions to optimize efficacy, safety, and accessibility. Ultimately, the goal is to gather evidence-based insights and foster innovation that will accelerate the development and clinical adoption of BsAbs and bispecific ADCs as transformative therapies for solid tumors and hematological malignancies. Through this collaborative effort, the Research Topic aspires to contribute to a new era of targeted and precision medicine in oncology and hematology. This Research Topic explores the rapidly evolving field of BsAbs.

and bispecific ADCs focusing on their development and clinical application Contributors are encouraged to address Advances in molecular engineering including novel formats platforms and dual targeting strategies Mechanistic insights into dual antigen targeting immune modulation and tumor microenvironment interactions Preclinical and clinical studies on efficacy safety pharmacokinetics and toxicity management Approaches to address challenges such as tumor heterogeneity limited tumor penetration and resistance mechanisms Combinatorial strategies with immune checkpoint inhibitors CAR T therapies or other modalities Manufacturing scalability and regulatory considerations for clinical translation We welcome original research reviews clinical case studies and opinion pieces offering new insights and advancing the field Submissions should support innovation and collaboration to enhance the therapeutic potential of BsAbs and bispecific ADCs in oncology and hematology

ICT Use and Healthy Longevity Kun Wang,Hee Yun Lee,Qiushi Feng,Danan Gu,2025-12-02 With the revolutionary technology advancement and the global population aging there has been increasing recognition of the importance of the use of information and computer technology ICT among older people and the need for ICT inclusivity to ensure that all older individuals can benefit equally from the modern technology ICT use is also considered to has the potential to promote healthy longevity by telehealth and health monitoring social connections cognitive stimulation access to information and lifelong learning among others Although there are growing empirical studies on ICT use at older ages a good summary and review of the current findings especially from those of non Western societies is largely absent Based on a wide range of evidence based analyses and real world examples and a more refined scheme of measures this book presents the most updated findings in the field conducts analyses from cross national and multicultural lens and offers multidisciplinary and comprehensive insights on how individual cultural societal and institutional factors shape ICT use and healthy aging across nations The wide scope and the holistic approach of the book makes it a timely and valuable resource for researchers practitioners policymakers healthcare professionals other stakeholders and anyone interested in understanding the role of ICT in promoting healthy aging and improving the lives of older adults
