**Regulating Hate Speech Created by Generative AI** Jay Liebowitz, 2024-08-02 Regulating Hate Speech Created by Generative AI explores the new hybrid space of Human Machine Interaction HMI in which hate speech is represented and computed through algorithms and AI generative systems. The book is exploratory because there are still many problem solving challenges to be faced. It is also innovative because it is not assuming that solutions lie only in technological advancements but on a broader scale. In this sense large language models can and are being considered from a holistic view i.e. from the different dimensions and layers of regulatory and legal governance. Highlights of the book include Generative AI and social engines of hate. An introduction to generative Artificial Intelligence application trends and ethics. The mechanics and validation of generative AI outcomes. An evaluation of Generative AI for hate speech detection. Best practices and key considerations for AI regulation. Using GenAI capabilities for early detection of threats in the digital environment. This book is a hard look at ways to regulate generative AI to reduce online hate and secure justice in a digital environment. Featuring research and offering practical guidelines the book examines guidelines for regulating generative AI models so they do not contribute to online hate disinformation and imagery.

**c't Working with AI** c't-Redaktion, 2024-01-24 The special issue of c't KI Praxis provides tests and practical instructions for working with chatbots. It explains why language models make mistakes and how they can be minimised. This not only helps when you send questions and orders to one of the chatbots offered online. If you do not want to or are not allowed to use the cloud services for data protection reasons for example you can also set up your own voice AI. The c't editorial team explains where to find a suitable voice model, how to host it locally and which service providers can host it. The fact that generative AI is becoming increasingly productive harbours both opportunities and risks. Suitable rules for the use of AI in schools training and at work help to exploit opportunities and minimise risks.
