NEC and Partnering John Bennett, Andrew Baird, 2001 This guide outlines the essential steps that project teams need to take to ensure they deliver world class performance by providing an in depth picture of the practical realities of using the NEC coupled with the partnering philosophy

Commercial Management of Projects David Lowe, Roine Leiringer, 2008-04-15 This is the first book to establish a theoretical framework for commercial management It argues that managing the contractual and commercial issues of projects from project inception to completion is vital in linking operations at the project level and the multiple projects portfolios programmes level to the corporate core of a company The book focuses on commercial management within the context of project oriented organisations for example aerospace construction IT pharmaceutical and telecommunications in the private and public sectors By bringing together contributions from leading researchers and practitioners in commercial management it presents the state of the art in commercial management covering both current research and best practice Commercial Management of Projects defining the discipline covers the external milieu competition culture procurement systems the corporate milieu corporate governance strategy marketing trust outsourcing the projects milieu management of uncertainty conflict management and dispute resolution performance measurement value management and the project milieu project governance contract management bidding purchasing logistics and supply cost value reconciliation Collectively the chapters constitute a step towards the creation of a body of knowledge and a research agenda for commercial management

Construction Cost Management Keith Potts, Nii Ankrah, 2014-01-23 In this updated and expanded second edition Keith Potts and Nii Ankrah examine key issues in construction cost management across the building and civil engineering sectors both in the UK and overseas Best practice from pre contract to post contract phases of the project life cycle are illustrated using major projects such as Heathrow Terminal 5 Crossrail and the London 2012 Olympics as case studies More worked examples legal cases case studies and current research have been introduced to cover every aspect of the cost manager's role Whole life costing value management and risk management are also addressed and self test questions at the end of each chapter support independent learning This comprehensive book is essential reading for students on surveying and construction management programmes as well as built environment practitioners with cost or project management responsibilities

The New Engineering Contract Arthur McInnis, 2001 The introduction of the New Engineering Contract NEC encourages a systematic approach to contracting which is multidisciplinary in nature and fully interlocked in form The NEC is intended by its supporters to be more flexible and easier to use than any current leading traditional standard forms of contract It is believed that these features reduce adversariality and disputes The NEC seeks to achieve this aim primarily through co operative management techniques and incentives built into the NEC's procedures This commentary analyses and evaluates these and related claims of innovation The New Engineering Contract A legal commentary examines the background to the NEC its design objectives

structure procedures and likely judicial interpretation to determine whether it improves upon the traditional standard forms of contract. Special attention is given in the commentary to the development and the significance of the principles underlying preparation of the NEC as well as the arguments in favour of and against them. Throughout the detailed commentary upon the NEC clauses comparisons to the traditional forms are also made to highlight unique features and principles of general application. The conclusion reached is that the NEC does make a significant contribution to the development of standard forms of contract, addresses many of their short comings and offers one of the best models for their future development direction and design. The commentary draws upon the body of the project management literature and legal analysis to support its conclusions. *The New Engineering Contract: A legal commentary* will be essential reading for lawyers, barristers and solicitors as well as engineers and project managers.

Construction Law Jim Mason, 2023-05-09 This second edition of *Construction Law: From Beginner to Practitioner* provides a thorough and comprehensive guide to construction law by blending together black letter law and socio legal approaches. This mixed methodology makes an ideal introduction to the subject for those studying to enter the architecture, engineering and construction (AEC) industry in a professional capacity. Designed to equip the student with all they need to know about construction law, the topics covered include the fundamentals of law and the English legal system, contract, business, tort and property law, procurement, subcontracting and partnering, claims, damages, losses and expenses, dispute resolution including mediation, arbitration, litigation and adjudication. The book's suitability for study is enhanced by its logical structure, chapter summaries and further reading lists, whilst the role of law in achieving a more collaborative and less confrontational AEC industry is examined in detail. Fully updated throughout, this new edition includes coverage of post Grenfell legislation, increased coverage of modern methods of construction and continuously evolving technologies such as BIM and digital twins, NEC4 and the latest JCT contract suite and the Construction Playbook. This book is useful not only for understanding the basics but also as a reference that practitioners will use time and again.
