**Programming Computer Vision with Python** Jan Erik Solem, 2012-06-19 If you want a basic understanding of computer vision s underlying theory and algorithms this hands on introduction is the ideal place to start You ll learn techniques for object recognition 3D reconstruction stereo imaging augmented reality and other computer vision applications as you follow clear examples written in Python Programming Computer Vision with Python explains computer vision in broad terms that won t bog you down in theory You get complete code samples with explanations on how to

reproduce and build upon each example along with exercises to help you apply what you've learned. This book is ideal for students, researchers, and enthusiasts with basic programming and standard mathematical skills. Learn techniques used in robot navigation, medical image analysis, and other computer vision applications. Work with image mappings and transforms such as texture warping and panorama creation. Compute 3D reconstructions from several images of the same scene. Organize images based on similarity or content using clustering methods. Build efficient image retrieval techniques to search for images based on visual content. Use algorithms to classify image content and recognize objects. Access the popular OpenCV library through a Python interface.

*Learning OpenCV 4: Computer Vision with Python* Joseph Howse, Joe Minichino, 2020-02-20. Updated for OpenCV 4 and Python 3, this book covers the latest on depth cameras, 3D tracking, augmented reality, and deep neural networks, helping you solve real-world computer vision problems with practical code.

**Key Features:** Build powerful computer vision applications in concise code with OpenCV 4 and Python 3. Learn the fundamental concepts of image processing, object classification, and 2D and 3D tracking. Train, use, and understand machine learning models such as Support Vector Machines (SVMs) and neural networks.

**Book Description:** Computer vision is a rapidly evolving science encompassing diverse applications and techniques. This book will not only help those who are getting started with computer vision but also experts in the domain. You'll be able to put theory into practice by building apps with OpenCV 4 and Python 3. You'll start by understanding OpenCV 4 and how to set it up with Python 3 on various platforms. Next, you'll learn how to perform basic operations such as reading, writing, manipulating, and displaying still images, videos, and camera feeds. From taking you through image processing, video analysis, and depth estimation and segmentation to helping you gain practice by building a GUI app, this book ensures you'll have opportunities for hands-on activities. Next, you'll tackle two popular challenges: face detection and face recognition. You'll also learn about object classification and machine learning concepts which will enable you to create and use object detectors and classifiers and even track objects in movies or video camera feed. Later, you'll develop your skills in 3D tracking and augmented reality. Finally, you'll cover ANNs and DNNs, learning how to develop apps for recognizing handwritten digits and classifying a person's gender and age. By the end of this book, you'll have the skills you need to execute real-world computer vision projects.

**What you will learn:** Install and familiarize yourself with OpenCV 4's Python 3 bindings. Understand image processing and video analysis basics. Use a depth camera to distinguish foreground and background regions. Detect and identify objects and track their motion in videos. Train and use your own models to match images and classify objects. Detect and recognize faces and classify their gender and age. Build an augmented reality application to track an image in 3D. Work with machine learning models including SVMs, artificial neural networks (ANNs), and deep neural networks (DNNs).

**Who this book is for:** If you are interested in learning computer vision, machine learning, and OpenCV in the context of practical real-world applications, then this book is for you. This OpenCV book will also be useful for anyone getting started with computer vision as well as experts who want to stay up to date with

OpenCV 4 and Python 3 Although no prior knowledge of image processing computer vision or machine learning is required familiarity with basic Python programming is a must

**Learning OpenCV 3 Computer Vision with Python** Joe Minichino, 2015 Unleash the power of computer vision with Python using OpenCV About This Book Create impressive applications with OpenCV and Python Familiarize yourself with advanced machine learning concepts Harness the power of computer vision with this easy to follow guide Who This Book Is For Intended for novices to the world of OpenCV and computer vision as well as OpenCV veterans that want to learn about what's new in OpenCV 3 this book is useful as a reference for experts and a training manual for beginners or for anybody who wants to familiarize themselves with the concepts of object classification and detection in simple and understandable terms Basic knowledge about Python and programming concepts is required although the book has an easy learning curve both from a theoretical and coding point of view What You Will Learn Install and familiarize yourself with OpenCV 3's Python API Grasp the basics of image processing and video analysis Identify and recognize objects in images and videos Detect and recognize faces using OpenCV Train and use your own object classifiers Learn about machine learning concepts in a computer vision context Work with artificial neural networks using OpenCV Develop your own computer vision real life application In Detail OpenCV 3 is a state of the art computer vision library that allows a great variety of image and video processing operations Some of the more spectacular and futuristic features such as face recognition or object tracking are easily achievable with OpenCV 3 Learning the basic concepts behind computer vision algorithms models and OpenCV's API will enable the development of all sorts of real world applications including security and surveillance Starting with basic image processing operations the book will take you through to advanced computer vision concepts Computer vision is a rapidly evolving science whose applications in the real world are exploding so this book will appeal to computer vision novices as well as experts of the subject wanting to learn the brand new OpenCV 3 0 0 You will build a theoretical foundation of image processing and video analysis and progress to the concepts of classification through machine learning acquiring the technical know how that will allow you to create and use object detectors and classifiers and even track objects in movies or video camera feeds Finally the journey will end in the world of artificial neural networks along with the development of a hand written digits recognition application Style and approach This book is a comprehensive guide to the brand new OpenCV 3 with Python to develop real life computer vision applications

**Hands-on ML Projects with OpenCV: Master Computer Vision and Machine Learning using OpenCV and Python** Muges S., 2023-08-09 Be at your A game in building Intelligent systems by leveraging Computer vision and Machine Learning Key Features Step by step instructions and code snippets for real world ML projects Covers entire spectrum from basics to advanced concepts such as deep learning transfer learning and model optimization Loaded with practical tips and best practices for implementing machine learning with OpenCV for optimising your workflow Book Description This book is an in depth guide that merges machine learning techniques with OpenCV the most popular computer vision library using

Python The book introduces fundamental concepts in machine learning and computer vision progressing to practical implementation with OpenCV Concepts related to image preprocessing contour and thresholding techniques motion detection and tracking are explained in a step by step manner using code and output snippets Hands on projects with real world datasets will offer you an invaluable experience in solving OpenCV challenges with machine learning It s an ultimate guide to explore areas like deep learning transfer learning and model optimization empowering readers to tackle complex tasks Every chapter offers practical tips and tricks to build effective ML models By the end you would have mastered and applied ML concepts confidently to real world computer vision problems and will be able to develop robust and accurate machine learning models for diverse applications Whether you are new to machine learning or seeking to enhance your computer vision skills This book is an invaluable resource for mastering the integration of machine learning and computer vision using OpenCV and Python What you will learn Learn how to work with images and perform basic image processing tasks using OpenCV Implement machine learning techniques to computer vision tasks such as image classification object detection and image segmentation Work on real world projects and datasets to gain hands on experience in applying machine learning techniques with OpenCV Explore the concepts of deep learning using Tensorflow and Keras and how it can be used for computer vision tasks Who is this book for This book is for everyone with a basic understanding of programming and who wants to apply machine learning in computer vision using OpenCV and Python Whether you re a student researcher or developer this book will equip you with practical skills for machine learning projects Some familiarity with Python and machine learning concepts is assumed Table of ContentsChapter 1 Getting Started With OpenCV Chapter 2 Basic Image Video Analytics in OpenCV Chapter 3 Image Processing 1 using OpenCV Chapter 4 Image Processing 2 using OpenCV Chapter 5 Thresholding and Contour Techniques Using OpenCV Chapter 6 Detect Corners and Road Lane using OpenCV Chapter 7 Object And Motion Detection Using Opencv Chapter 8 Image Segmentation and Detecting Faces Using OpenCV Chapter 9 Introduction to Deep Learning with OpenCV Chapter 10 Advance Deep Learning Projects with OpenCV Chapter 11 Deployment of OpenCV projects

*Mastering Python* Rick van Hattem,2022-05-20 Use advanced features of Python to write high quality readable code and packages Key Features Extensively updated for Python 3 10 with new chapters on design patterns scientific programming machine learning and interactive Python Shape your scripts using key concepts like concurrency performance optimization asyncio and multiprocessing Learn how advanced Python features fit together to produce maintainable code Book Description Even if you find writing Python code easy writing code that is efficient maintainable and reusable is not so straightforward Many of Python s capabilities are underutilized even by more experienced programmers Mastering Python Second Edition is an authoritative guide to understanding advanced Python programming so you can write the highest quality code This new edition has been extensively revised and updated with exercises four new chapters and updates up to Python 3 10 Revisit important basics including Pythonic style and syntax and functional programming Avoid common mistakes made by programmers of all experience levels Make smart decisions about the best testing and debugging tools to use optimize your code s performance across multiple machines and Python versions and deploy often forgotten Python features to your advantage Get fully up to speed with asyncio and stretch the language even further by accessing C functions with simple Python calls Finally turn your new and improved code into packages and share them with the wider Python community If you are a Python programmer wanting to improve your code quality and readability this Python book will make you confident in writing high quality scripts and taking on bigger challenges What you will learn Write beautiful Pythonic code and avoid common Python coding mistakes Apply the power of decorators generators coroutines and metaclasses Use different testing systems like pytest unittest and doctest Track and optimize application performance for both memory and CPU usage Debug your applications with PDB Werkzeug and faulthandler Improve your performance through asyncio multiprocessing and distributed computing Explore popular libraries

like Dask NumPy SciPy pandas TensorFlow and scikit learn Extend Python's capabilities with C/C++ libraries and system calls

Who this book is for This book will benefit more experienced Python programmers who wish to upskill serving as a reference for best practices and some of the more intricate Python techniques Even if you have been using Python for years chances are that you haven't yet encountered every topic discussed in this book A good understanding of Python programming is necessary

*OpenCV with Python* Panchanand Jha, 2020-09-16 Image processing is a technique to analyse and extract valuable information from an image using computer vision algorithms Mathematically an image is nothing but two dimensional matrix and function of two coordinate x and y The x and y coordinates gives location of pixel and its value This value of pixel defines the brightness or color of an image at that location On the other hand image can also have three dimensional vector such as Red Green and Blue RGB Therefore it is quite important to have mathematical description of an image to develop further image processing algorithms These algorithms have wide range of applications such as image stitching morphing object detections recognition color filtering etc Present scenario of computer vision or digital imaging has been widely adopted in various places such as security camera robotics vision movies special effects and counting The extreme use of image or video processing or one can say the major application of the image video processing algorithms is to generate special effects on movies In daily life we can find wide net of computer vision and it is keep on expanding On the other hand automobiles aircrafts drones ships and trains are equipped with computer vision Automobiles using computer vision for rear parking assistance drones for surveillances and so on Now a day's major use of computer vision can also be found in social network sites such as Facebook Google YouTube Lens kart etc in these sites image video processing with facial recognition algorithm is being used If someone upload a video on YouTube then it has to pass through video processing algorithm for various reasons Therefore OpenCv plays a crucial role here for processing these images and videos In OpenCV library multiple algorithms and function are available to perform certain task for example any image can be resized cropped format pasting or overlapping of two images rotating flipping drawing color transformations etc can be done with simple line of code In further chapter the details of these codes are explained OpenCV is capable of optimizing memory handling error handling multi threading and re enterability These properties of OpenCV makes it computationally efficient and best for real time practical implementations More details of OpenCV can be found in the OpenCV official website as this project is focused on image video processing
