Parallel Programming and Applications Peter Fritzson,Leif Finmo,1995 ZEUS Centres of European Supercomputing is a network for information exchange and co operation between European Supercomputer Centres During the fall of 1994 the idea was put forward to start an annual workshop to stimulate the exchange of ideas and experience in parallel programming and computing between researchers and users from industry and academia The first workshop in this series the ZEUS 95 Workshop on Parallel Programming and Computation is organized at Linkoping University where the Swedish ZEUS centre NSC National Supercomputer Centre is located This is open for all researchers and users in the field of parallel computing **Monographic Series** Library of Congress,1978 *The Organization of Reduction, Data Flow, and Control Flow Systems* Werner Kluge,1992 In light of research over the last decade on new ways of representing and performing computations this book provides a timely reexamination of computer organization and computer architecture It systematically investigates the basic organizational concepts of reduction data flow and control flow or state transition and their relationship to the underlying programming paradigms For each of these concepts Kluge looks at how princip1es of language organization translate into architectures and how architectural features translate into concrete system implementations comparing them in order to identify their similarities and differences The focus is primarily on a functional programming paradigm based on a full fledged operational calculus and on its realization by various reduction systems Kluge first presents a brief outline of the overall configuration of a computing system and of an operating system kernel introduce elements of the theory of Petrinets as modeling tools for nonsequential systems and processes and use a simple form of higher order Petri nets to identify by means of examples the operational and control disciplines that govern the organization of reduction data flow and control flow computations He then introduces the notions of abstract algorithms and of reductions and includes an overview of the theory of the calculus The next five chapters describe the various computing engines that realize the reduction semantics of a full fledged calculus The remaining chapters provide self contained investigations of the G machine SKI combinator reduction and the data flow approach for implementing the functional programming paradigm This is followed by a detailed description of a typical control flow or von Neumann machine architecture a VAX11 system Properties of these machines are summarized in the concluding chapter which classifies them according to the semantic models they support **Advances In Numerical Methods And Applications - Proceedings Of The Third International Conference** Ivan Tomov Dimov,Blagovest H Sendov,Panayot S Vassilevski,1994-07-29 The topics in this volume range from basic research in numerical methods to applications in physics mechanics engineering environmental science and other areas These include numerical methods finite difference finite element and boundary element methods numerical methods of approximation theory Monte Carlo methods preconditioning methods parallel algorithms applications of numerical methods
