Joyce A. Cascio,2005-05 Design Technology for Heterogeneous Embedded Systems Gabriela Nicolescu,Ian O'Connor,Christian Piguet,2012-02-02 Design technology to address the new and vast problem of heterogeneous embedded systems design while remaining compatible with standard More Moore flows i.e capable of simultaneously handling both silicon complexity and system complexity represents one of the most important challenges facing the semiconductor industry today and will be for several years to come While the micro electronics industry over the years and with its spectacular and unique evolution has built its own specific design methods to focus mainly on the management of complexity through the establishment of abstraction levels the emergence of device heterogeneity requires new approaches enabling the satisfactory design of physically heterogeneous embedded systems for the widespread deployment of such systems Heterogeneous Embedded Systems compiled largely from a set of contributions from participants of past editions of the Winter School on Heterogeneous Embedded Systems Design Technology FETCH proposes a necessarily broad and holistic overview of design techniques used to tackle the various facets of heterogeneity in terms of technology and opportunities at the physical level signal representations and different abstraction levels architectures and components based on hardware and software in all the main phases of design modeling validation with multiple models of computation synthesis and optimization It concentrates on the specific issues at the interfaces and is divided into two main parts The first part examines mainly theoretical issues and focuses on the modeling validation and design techniques themselves The second part illustrates the use of these methods in various design contexts at the forefront of new technology and architectural developments
