Operations Management Steven A. Melnyk, David R. Denzler, 1996-02-01 *Operations Management Study Guide* Steven A. Melnyk, David R. Denzler, Lawrence P. Ettkin, 1996 *MyPOM* David R. Denzler, 2003 Production & Operations Management Upendra Kachru, 2009

This book takes a pedagogical approach that is participative and interactive involving the case study method of learning. Chapters start with an Indian case study of a well known company. This is used as a capstone case for the chapter. The student will find this an easy learning experience as data and additional information for these enterprises is readily available. The selection of such cases makes classroom learning truly suited to the Indian business environment. The value driven approach to Operations Management is used in structuring the text into three modules. The first module discusses the infrastructure function of Operations Management. Infrastructure function is considered to be product process capacity and location. Module Two describes the structure of the operations function. This includes quality and other product transformation processes. Module Three focuses on the organization people and processes i.e. the job, the work and the workplace. In addition most of the mathematical techniques have been separated into supplements attached to the relevant chapters. Software solutions for the techniques have been explained in the text. Every mathematical technique is exemplified with a number of solved problems. Unlike many Production and Operations Management texts this book covers E-commerce, Industrial Safety, Maintenance, Environmental Management, Green Productivity and new technological trends in the discipline. These sections should add to the significance of exploring how firms can gain competitive advantage and promote sustainable development at the same time. The last section of the book comprises of a selection of cases from The Indian Institute of Management at Ahmedabad. The cases encompass the entire spectrum of Indian Industry the private and the public sectors, professional and family managed business organizations, service and manufacturing industries, single industry and conglomerates. The cases relate to Operations Strategy, Supply Chain Management, Capacity Planning, New Products Manufacturing Technologies etc. The Case Studies are of world class. Prof Tirupati one of the authors of the case studies according to Management Science has penned one of the top 100 management articles in the 50 years. The book is comprehensive, lucid and easy to read and understand. It should be of great value both to students and faculty.

Japanese and German Enterprises Toshio Yamazaki,2024-12-09 The objective of this book is to analyze and compare the processes of corporate expansion of postwar Japan and Germany It examines the evolution of distinctive Japanese and German business management styles through the adoption of American management methods thereby establishing a system of industrial concentration in contrast to the US de concentration policy This is the first time that the book draws on a range of topics related to business administration including the concentration of enterprises management and production systems management education marketing organizational structure and corporate governance The book compares the Japanese and German models Japanese enterprises developed a management style that was suitable for American and Japanese markets in part due to the underdeveloped Asian markets Meanwhile German enterprises established a management style for European markets The book considers the specificities of the Japanese management model predicated on thorough cost reduction and few product defects In contrast the German management model placed a premium on differentiation based on product quality and functionality with a particular focus on core markets and the skills of the workforce The book posits that corporate expansion was a determining factor in the regionalization of each country Japan underwent a transformation toward Asianization which depended on production and markets in Asia after the 1990s Germany on the other hand consistently pursued Europeanization after the war in two complementary ways 1 a heavy reliance on the European region and 2 the endeavor to advance European integration Transformations in business management are analyzed using the author's two original frameworks 1 The term total system of business management denotes the fundamental conditional structures that regulate and define the established methods of business management within the confines of capitalism in a specific country 2 The term reframing is used to explain the adaptation modification and adjustment of one country's particular management style to another nation These arguments reframe how we understand the historical processes of corporate expansion and provide milestones for a comparative study of management through common factors and characteristics of management *Developing Strategies for Competitive Advantage* Patrick B. McNamee,1990 How can an organization use strategy to achieve a competitive advantage over its rivals This book addresses this fundamental issue in strategic planning with a selection of exceptional articles covering two complementary areas techniques for developing competitive strategies and case histories showing how these techniques have been applied to particular situations The authors pinpoint the crucial factors which help companies whether smaller firms or multinationals successfully build sustainable and profitable
