**Meta-Heuristics** Stefan Voß, Silvano Martello, Ibrahim H. Osman, Cathérine Roucairol, 2012-12-06 Meta Heuristics Advances and Trends in Local Search Paradigms for Optimizations comprises a carefully refereed selection of extended versions of the best papers presented at the Second Meta Heuristics Conference MIC 97 The selected articles describe the most recent developments in theory and applications of meta heuristics heuristics for specific problems and comparative case studies The book is divided into six parts grouped mainly by the techniques considered The extensive first part with twelve papers covers tabu search and its application to a great variety of well known combinatorial optimization problems including the resource constrained project scheduling problem and vehicle routing problems In the second part we find one paper where tabu search and simulated annealing are investigated comparatively and two papers which consider hybrid methods combining tabu search with genetic algorithms The third part has four papers on genetic and evolutionary algorithms Part four arrives at a new paradigm within meta heuristics The fifth part studies the behavior of parallel local search algorithms mainly from a tabu search perspective The final part examines a great variety of additional meta heuristics topics including neural networks and variable neighbourhood search as well as guided local search Furthermore the integration of meta heuristics with the branch and bound paradigm is investigated *Hybrid Metaheuristics* Christian Blum, Günther R.

Raidl, 2016-05-23 This book explains the most prominent and some promising new general techniques that combine metaheuristics with other optimization methods A first introductory chapter reviews the basic principles of local search prominent metaheuristics and tree search dynamic programming mixed integer linear programming and constraint programming for combinatorial optimization purposes The chapters that follow present five generally applicable hybridization strategies with exemplary case studies on selected problems incomplete solution representations and decoders problem instance reduction large neighborhood search parallel non independent construction of solutions within metaheuristics and hybridization based on complete solution archives The authors are among the leading researchers in the hybridization of metaheuristics with other techniques for optimization and their work reflects the broad shift to problem oriented rather than algorithm oriented approaches enabling faster and more effective implementation in real life applications This hybridization is not restricted to different variants of metaheuristics but includes for example the combination of mathematical programming dynamic programming or constraint programming with metaheuristics reflecting cross fertilization in fields such as optimization algorithmics mathematical modeling operations research statistics and simulation The book is a valuable introduction and reference for researchers and graduate students in these domains
