Spatio-Temporal Modeling and Device Optimization of Passively Mode-Locked Semiconductor Lasers Stefan

Meinecke, 2022-03-26 This thesis investigates passively mode locked semiconductor lasers by numerical methods The understanding and optimization of such devices is crucial to the advancement of technologies such as optical data communication and dual comb spectroscopy The focus of the thesis is therefore on the development of efficient numerical models which are able both to perform larger parameter studies and to provide quantitative predictions Along with that visualization and evaluation techniques for the rich spatio temporal laser dynamics are developed these facilitate the physical interpretation of the observed features The investigations in this thesis revolve around two specific semiconductor devices namely a monolithically integrated three section tapered quantum dot laser and a V shaped external cavity laser In both cases the simulations closely tie in with experimental results which have been obtained in collaboration with the TU Darmstadt and the ETH Zurich Based on the successful numerical reproduction of the experimental findings the emission dynamics of both lasers can be understood in terms of the cavity geometry and the active medium dynamics The latter in particular highlights the value of the developed simulation tools since the fast charge carrier dynamics are generally not experimentally accessible during mode locking operation Lastly the numerical models are used to perform laser design explorations and thus to derive recommendations for further optimizations Scientific and Technical Aerospace Reports

Engineering Mathematics with MATLAB® Dean G. Duffy, 2025-08-19 In the five previous editions of Advanced Engineering Mathematics with MATLAB the author presented a text firmly grounded in mathematics that engineers and scientists must understand and know how to use Tapping into decades of teaching at the US Navy Academy and the US Military Academy and serving for twenty five years at NASA Goddard Space Flight he combines teaching and practical experience that is rare among authors of advanced engineering mathematics books This edition continues to refine a smaller easier to read and useful version of this classic textbook While competing textbooks continue to grow the book presents a slimmer more practical option to align with the expectations of today s students The new edition of the author s classic textbook continues on a path to creating the best possible learning resource for instructors and students alike Through extensive class testing over five previous editions including the author s current course at the US Naval Academy the book has been steadily improved The primary mission of this edition is to dramatically increase the quality and quantity of examples and problems especially in the chapters on differential equations and Laplace transforms The chapters on differential equations linear algebra Fourier series and Laplace transforms have seen the greatest changes Of course this edition continues to offer a

wealth of examples and applications from scientific and engineering literature a highlight of previous editions MATLAB remains central to the presentation and is employed to reinforce the concepts that are taught Worked solutions are given in the back of the book An Instructor s Solutions Manual is also available **Books in Print Supplement** ,1994 The Publishers' Trade List Annual ,1985 The Meteorological Magazine ,1992 **Meteorological Monographs** ,1963
