**Méthode de quasi-réversibilité et applications** Robert Lattès,Jacques-Louis Lions,1967      **Methode de Quasi-reversibilite' Et Applications** Robert Lattès,Jacques-Louis Lions,1967      [Coefficient Inverse Problems for Parabolic Type Equations and Their Application](#) P. G. Danilaev,2014-07-24 As a rule many practical problems are studied in a situation when the input data are incomplete For example this is the case for a parabolic partial differential equation describing the non stationary physical process of heat and mass transfer if it contains the unknown thermal conductivity coefficient Such situations arising in physical problems motivated the appearance of the present work In this monograph the author considers numerical solutions of the quasi inversion problems to which the solution of the original coefficient inverse problems are reduced Underground fluid dynamics is taken as a field of practical use of coefficient inverse problems The significance of these problems for this application domain consists in the possibility to determine the physical fields of parameters that characterize the filtration properties of porous media oil strata This provides the possibility of predicting the conditions of oil field development and the effects of the exploitation The research carried out by the author showed that the quasi inversion method can be applied also for solution of interior coefficient inverse problems by reducing them to the problem of continuation of a solution to a parabolic equation This reduction is based on the results of the proofs of the uniqueness theorems for solutions of the corresponding coefficient inverse problems      **Frontiers in Mathematical Analysis and Numerical Methods** Jacques-Louis Lions,Daqian Li,2004 This volume is a collection of articles in memory of Jacques Louis Lions a leading mathematician and the founder of the Contemporary French Applied Mathematics School The contributions have been written by his friends colleagues and students The book concerns many important results in analysis geometry numerical methods fluid mechanics control theory etc      *Ill-Posed Problems in Natural Sciences* Andrei N. Alifanov,2012-12-06 This research monograph presents a systematic treatment of the theory of the propagation of transient electromagnetic fields such as optical pulses through dielectric media which exhibit both dispersion and absorption The work divides naturally into two parts Part I presents a summary of the fundamental theory of the radiation and propagation of rather general electromagnetic waves in causal linear media which are homogeneous and isotropic but which otherwise have rather general dispersive and absorbing properties In Part II we specialize to the propagation of a plane transient electromagnetic field in a homogeneous dielectric Although we have made some contributions to the fundamental theory given in Part I most of the results of our own research appear in Part II The purpose of the theory presented in Part II is to predict and to explain in explicit detail the dynamics of the field after it has propagated far enough through the medium to be in the mature dispersion regime It is the subject of a

classic theory based on the research conducted by A Sommerfeld and L Multiscale Computational Methods in Chemistry and Physics Achi Brandt,Jerzy Bernholc,Kurt Binder,2001 This book brings together interdisciplinary contributions ranging from applied mathematics theoretical physics quantum chemistry and molecular biology all addressing various facets of the problem to connect the many different scales that one has to deal with in the computer simulation of many systems of interest in chemistry e g polymeric materials biological molecules clusters surface and interface structure Particular emphasis is on the multigrid technique and its applications ranging from electronic structure calculations to the statistical mechanics of polymers Geotechnics Fundamentals and Applications in Construction Rashid Mangushev,Askar Zhussupbekov,Yoshinori Iwasaki,Igor Sakharov,2019-04-29 Geotechnical Fundamentals and Applications in Construction New Materials Structures Technologies and Calculations contains the papers presented at the International Conference on Geotechnical Fundamentals and Applications in Construction New Materials Structures Technologies and Calculations GFAC 2019 Saint Petersburg Russia 6 8 February 2019 The contributions present the latest research findings developments and applications in the areas of geotechnics soil mechanics foundations geological engineering and share experiences in the design of complex geotechnical objects and are grouped in 8 sections Analytical decisions and numerical modeling for foundations Design and construction in geologically hazardous conditions Methods for surveying the features of dispersed rocky soils and structurally unstable soils Exploration territory improvement and reconstruction in conditions of compact urban planning and enterprises etc Construction reconstruction and exploitation of infrastructure facilities in different soil conditions R Condition survey and accident evolution analysis in construction Up to date monitoring techniques in building construction and exploitation Geotechnical Fundamentals and Applications in Construction New Materials Structures Technologies and Calculations collects the state of the art in geotechnology and construction and will be of interest to academia and professionals in geotechnics soil mechanics foundation engineering and geological engineering Soviet Mathematics ,1976 Soviet Mathematics - Doklady ,1975 **Identification of Distributed Systems** Gordon A.
