Methodical Introduction Practice Medicine Classic:

Methodological and Biostatistical Foundations of Clinical Neuropsychology and Medical and Health Disciplines Domenic V Cicchetti, Byron P Rourke, 2004-06-01 The goal of the second edition is to introduce the advance undergraduate or graduate student and more seasoned research scientists in any of the allied health sciences to a wide array of methodological and biostatistical issues as they occur in the context of both published and ongoing research Some sixty four articles published between 1992 and 2002 have been selected from the Journal of Clinical and Experimental Neuropsychology The Clinical Neuropsychologist and Child Neuropsychology and reproduced in this volume While building upon a working knowledge and understanding of the basic univariate data analytic techniques and the research designs to which they apply the approach to the more complex multivariate techniques is presented primarily at a conceptual and essentially non mathematical level While the issue of the complexity of some of the more recent and standard approaches to data analytic strategies and their important role to specific research designs is important to convey there remains an even more fundamental issue of whether the results of correctly applied data analytic strategies make any practical or clinical sense above and beyond their having reached levels of statistical significance These critical issues are addressed throughout various commentaries that the editors make at appropriate points in the text The volume will appeal to advanced undergraduate and graduate students as well as clinical neuropsychologists and research scientists in any of the allied health disciplines

Encyclopedia of Classical Philosophy Donald J. Zeyl, 2013-10-23 The Encyclopedia of Classical Philosophy is a reference work on the philosophy of Greek and Roman antiquity It includes subjects and figures from the dawn of philosophy in Ionia in the 6th century BC to the demise of the Academy in Athens in the 6th century AD Scholarly study of the texts and philosophical thought of this period has been during the last half of the 20th century amazingly productive and has become increasingly sophisticated The 269 articles in the encyclopedia reflect this development While the majority of the articles are devoted to individual figures many of the articles are thematic surveys of broad areas such as epistemology ethics and political thought Some articles focus on particular concepts that evoked significant philosophical treatment by the ancients and have proved central to later thought Other articles treat fields that are no longer considered part of philosophy proper such as mathematics and science There are articles examining areas of intellectual or cultural endeavour such as poetry or rhetoric or genres of philosophical expression such as dialogue and diatribe Still others describe the historical developments of philosophical schools and traditions The encyclopedia includes a chronology and guide to further reading Best Reference Source
