Oblique Drawing A History Of Anti Perspective Writing Architecture:

Oblique Drawing Massimo Scolari, 2015-01-30 A challenge to the hegemony of perspective investigations into other forms of representation used by different cultures over the last two thousand years For more than half a century Erwin Panofsky's Perspective as Symbolic Form has dominated studies of visual representation Despite the hegemony of central projection or perspective other equally important methods of representation have much to tell us Parallel projection can be found on classical Greek vases in Pompeiian frescoes in Byzantine mosaics it returned in works of the historical avant garde and remains the dominant form of representation in China In Oblique Drawing Massimo Scolari investigates anti perspective visual representation over two thousand years finding in the course of his investigation that visual and conceptual representations are manifestations of the ideological and philosophical orientations of different cultures Images prove to be not just a form of art but a form of thought a projection of a way of life Scolari's generously illustrated studies show that illusionistic perspective is not the only or even the best representation of objects in history parallel projection for example preserves in scale the actual measurements of objects it represents avoiding the distortions of one point perspective Scolari analyzes the use of nonperspectival representations in pre Renaissance images of machines and military hardware architectural models and drawings and illustrations of geometrical solids He challenges Panofsky's theory of Pompeiian perspective and explains the difficulties encountered by the Chinese when they viewed Jesuit missionaries perspectival religious images Scolari vividly demonstrates the diversity of representational forms devised through the centuries and shows how each one reveals something that is lacking in the others

Approaches to Drawing in Architectural and

Urban Design Fabio Colonnese, Nuno Grancho, Robin Schaefferbeke, 2024-04-04 Architects draw for a variety of purposes they draw to assimilate places and precedents to generate ideas to develop a concept into a consistent project in a team to communicate ideas and solutions to patrons and clients and to guide building contractors during the construction stages as well as to produce further elaborations in order to publish their project in a treatise a journal or their own portfolio Most importantly architects draw to think and to manage complexity in a visual way By taking into account innovative and interdisciplinary uses of architectural drawing in the design process both historical and current the collection of chapters and interviews in this book frames a new critical perspective and a uniquely contextual appreciation of drawing as a way to encourage spatial thinking and practice in architecture and urbanism The authors take the discussion to a new level of philosophical sophistication while also considering drawing in relation to a series of specific engagements with urban development planning and architecture

Architecture and Abstraction Pier Vittorio Aureli, 2023-11-07 A landmark study of abstraction in architectural history theory and practice that challenges our assumptions about the meaning of abstract forms In this theoretical study of abstraction in architecture the first of its kind Pier Vittorio Aureli argues for a reconsideration of abstraction its meanings and its sources Although architects have typically interpreted abstraction in

formal terms the purposeful reduction of the complexities of design to its essentials Aureli shows that abstraction instead arises from the material conditions of building production In a lively study informed by Walter Benjamin Karl Marx Alfred Sohn Rethel and other social theorists this book presents abstraction in architecture not as an aesthetic tendency but as a movement that arises from modern divisions of labor and consequent social asymmetries These divisions were anticipated by the architecture of antiquity which established a distinction between manual and intellectual labor and placed the former in service to the latter Further abstractions arose as geometry used for measuring territories became the intermediary between land and money and eventually produced the logic of the grid In our own time architectural abstraction serves the logic of capitalism and embraces the premise that all things can be exchanged even experience itself is a commodity To resist this turn Aureli seeks a critique of architecture that begins not by scaling philosophical heights but by standing at the ground level of material practice

Rewriting Alberti Peter Eisenman, 2025-09-09 A fresh groundbreaking analysis of renowned Renaissance architect Leon Battista Alberti's five built works suggesting a new relationship of form to meaning Much has been written about Renaissance architect Leon Battista Alberti's mantra of part to whole as one of the continuing conditions of architecture While this underlying thesis has often been repeated in the annals of architectural history and theory architects have rarely questioned the idea In *Rewriting Alberti* architect Peter Eisenman suggests however that Alberti provoked a radical discourse beyond the part to whole dialogue featured in his *Ten Books of Architecture* Eisenman's in depth analysis of Alberti's five built works reveals a disjunction between the architect's buildings and theoretical writings suggesting a new relationship of form to meaning based on the fragmentation of homogeneous space *Rewriting Alberti* includes contributions by Pier Vittorio Aureli Mario Carpo and Daniel Sherer Carpo an architectural historian and critic theorizes that Alberti's work initiated an idea of the discipline as a notational system akin to contemporary computational logics By way of comparison Sherer an architectural historian reconsiders critic Manfredo Tafuri's readings of Alberti and architect and theorist Aureli draws on Alberti to propose another idea of the architectural project Here in one book are four different discourses and more than 60 drawings that look back at the origins of architectural signs and semiology and forward to understand the way that history informs architecture today

Formulations Andrew Witt, 2022-01-11 An investigation of mathematics as it was drawn encoded imagined and interpreted by architects on the eve of digitization in the mid twentieth century In *Formulations* Andrew Witt examines the visual methodological and cultural intersections between architecture and mathematics The linkages Witt explores involve not the mystic transcendence of numbers invoked throughout architectural history but rather architecture's encounters with a range of calculational systems techniques that architects inventively retooled for design Witt offers a catalog of mid twentieth century practices of mathematical drawing and calculation in design that preceded and anticipated digitization as well as an account of the formal compendia that became a cultural currency shared between modern mathematicians and modern architects Witt presents a series of

extensively illustrated biographies of method episodes that chart the myriad ways in which mathematics particularly the mathematical notion of modeling and drawing was spliced into the creative practice of design These include early drawing machines that mechanized curvature the incorporation of geometric maquettes theorems made flesh into the toolbox of design the virtualization of buildings and landscapes through surveyed triangulation and photogrammetry formal and functional topology stereoscopic drawing the economic implications of cubic matrices and a strange synthesis of the technological mineral and biological crystallographic design Trained in both architecture and mathematics Witt uses mathematics as a lens through which to understand the relationship between architecture and a much broader set of sciences and visual techniques Through an intercultural exchange with other disciplines he argues architecture adapted not only the shapes and surfaces of mathematics but also its values and epistemic ideals *The Second Digital Turn* Mario Carpo, 2017-10-20 The first digital turn in architecture changed our ways of making the second changes our ways of thinking Almost a generation ago the early software for computer aided design and manufacturing CAD CAM spawned a style of smooth and curving lines and surfaces that gave visible form to the first digital age and left an indelible mark on contemporary architecture But today's digitally intelligent architecture no longer looks that way In *The Second Digital Turn* Mario Carpo explains that this is because the design professions are now coming to terms with a new kind of digital tools they have adopted no longer tools for making but tools for thinking In the early 1990s the design professions were the first to intuit and interpret the new technical logic of the digital age digital mass customization the use of digital tools to mass produce variations at no extra cost has already changed the way we produce and consume almost everything and the same technology applied to commerce at large is now heralding a new society without scale a flat marginal cost society where bigger markets will not make anything cheaper But today the unprecedented power of computation also favors a new kind of science where prediction can be based on sheer information retrieval and form finding by simulation and optimization can replace deduction from mathematical formulas Designers have been toying with machine thinking and machine learning for some time and the apparently unfathomable complexity of the physical shapes they are now creating already expresses a new form of artificial intelligence outside the tradition of modern science and alien to the organic logic of our mind *Metropolis*, 1983-07

Artbibliographies Modern, 1998 **God's Own Language** Karl Kinsella, 2023-06-13 How modern architectural language was invented to communicate with the divine challenging a common narrative of European architectural history The architectural drawing might seem to be a quintessentially modern form and indeed many histories of the genre begin in the early modern period with Italian Renaissance architects such as Alberti Yet the Middle Ages also had a remarkably sophisticated way of drawing and writing about architecture *God's Own Language* takes us to twelfth century Paris where a Scottish monk named Richard of Saint Victor along with his mentor Hugh developed an innovative visual and textual architectural language In the process he devised techniques and terms that we still use today from

sectional elevations to the word plan Surprisingly however Richard s detailed drawings appeared not in an architectural treatise but in a widely circulated set of biblical commentaries Seeing architecture as a way of communicating with the divine Richard drew plans and elevations for such biblical constructions as Noah s ark and the temple envisioned by the prophet Ezekiel Interpreting Richard and Hugh s drawings and writings within the context of the thriving theological and intellectual cultures of medieval Paris Karl Kinsella argues that the popularity of these works suggests that centuries before the Renaissance there was a large circle of readers with a highly developed understanding of geometry and the visual language of architecture **ARCHITECTURAL DRAWING AND DRAUGHTSMEN** REGINALD.
