## **Oceans Environmental Issues Global Perspectives:**

**Oceans** James Fargo Balliett, 2010 Covering 71 percent of the planet oceans provided the unique environmental conditions necessary for the building blocks of life to form billions of years ago and continue to support life in important ways today they are home to nearly 50% of all species on earth they influence climate and weather patterns they provide food and water for humankind Yet they are being threatened by human activity and natural disasters The case studies in Oceans include a discussion of the most remote locations along the Mid Atlantic Ridge where new ocean floor is being formed underwater the Maldive Islands where rising sea levels may force residents to abandon their communities and the North Sea where fishing stocks have been dangerously depleted as a result of multiple nations unrelenting removal of certain species

**Freshwater** James Fargo Balliett, 2014-12-18 Freshwater is our planet's most precious resource and also the least conserved Freshwater makes up only 3 percent of the total water on the planet and yet the majority 1.9 percent is held in a frozen state in glaciers icebergs and polar ice fields This leaves approximately one half of 1 percent of the total volume of water on the planet as freshwater available in liquid form This book traces the complex history of the steady growth of humankind's water consumption which today reaches some 9.7 quadrillion gallons per year Along with a larger population has come the need for more drinking water larger farms requiring extensive irrigation and more freshwater to support business and industry At the same time such developments have led to increased water pollution Three detailed case studies are included The first looks at massive water systems in locations such as New York City and the efforts required to protect and transport such resources The second shows how growth has affected freshwater quality in the ecologically unique and geographically isolated Lake Baikal region of eastern Russia The third examines the success story of the privatized freshwater system in Chile and consider how that country's water sources are threatened by climate change

**Oceans** James Fargo Balliett, 2014-12-18 Covering 71 percent of the planet these saline bodies of water provided the unique conditions necessary for the building blocks of life to form billions of years ago This book explains how our oceans continue to support and influence life in important ways by providing the largest global source of protein in the form of fish populations by creating and influencing weather systems and by absorbing waste streams such as airborne carbon It is shown how oceans have an almost magnetic draw almost half of the world's population lives within a few hours of an ocean Although oceans are vast in size exceeding 328 million cubic miles 1.37 billion cubic kilometers they have been influenced by and have influenced humans in numerous ways The book includes three detailed case studies The first focuses on the most remote locations along the Mid Atlantic Ridge where new ocean floor is being formed twenty thousand feet underwater The second considers the Maldives a string of islands in the Indian Ocean where increasing sea levels may force residents to abandon some communities by 2020 The third describes the North Sea at the edge of the Arctic Ocean where fishing stocks have been dangerously depleted as a result of multiple nations unrelenting removal of the smallest and largest species

### **Governmental Response to Environmental Challenges in Global Perspective** Joseph G. Jabbara, O. P. Dwivedi, 1998

In our drive to improve human standards of living we have paradoxically paid scant attention to the need for clean air and water the impact of acid rain on agriculture lakes and rivers the effect of pollutants on the ozone layer the safe disposal of hazardous wastes and the relationship between population growth and the environment It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment priority is always given to the former Short term plans dictated by canons of political survival and expediency always seem to take precedence over long term strategies with politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric This book is an effort to better understand the problems faced by our global ecosystems It is also the result of the authors deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations *Encyclopedia of*
