**Space Modeling with SolidWorks and NX** Jože Duhovnik, Ivan Demsar, Primož Drešar, 2014-07-14 Through a series of step by step tutorials and numerous hands on exercises this book aims to equip the reader with both a good understanding of the importance of space in the abstract world of engineers and the ability to create a model of a product in virtual space a skill essential for any designer or engineer who needs to present ideas concerning a particular product within a professional environment The exercises progress logically from the simple to the more complex while Solid Works or NX is the software used the underlying philosophy is applicable to all modeling software In each case the explanation covers the entire procedure from the basic idea and production capabilities through to the real model the conversion from 3D model to 2D manufacturing drawing is also clearly explained Topics covered include modeling of prism axisymmetric symmetric and sophisticated shapes digitization of physical models using modeling software creation of a CAD model starting from a physical model free form surface modeling modeling of product assemblies following bottom up and top down principles and the presentation of a product in accordance with the rules of technical documentation This book which includes more than 500 figures will be ideal for students wishing to gain a sound grasp of space modeling techniques Academics and professionals will find it to be an excellent teaching and research aid and an easy to use guide

# 1 INTRODUCTION

Turning is a machining procedure used to get the ideal element of round metal The primary objective in present mechanical period is to create minimal effort quality item with required measurements in an optimum time Therefore the optimum cutting parameters are to be perceived first In turning the metal is in rotational movement and a cutting tool is utilized to shear away the undesired metals This procedure requires lathe machine or turning machine cutting tool work piece and fixture The work piece is fixed in the machine chuck and is pivoted at rapid The cutting tool is taken care of in corresponding to the hub of turn During this machining procedure the cutting parameters profoundly relies on the work piece cutting tool material and so on These are dictated by understanding or machine catalogue Surface roughness Tool life and machining time is a widely used attribute of product quality and in most cases a technical necessity for mechanical products Thus the optimum selection of cutting parameters such as feed rate depth of cut cutting speed etc generates optimum conditions during machining and becomes the main exigency of manufacturing industry Surface roughness Tool life and machining time is an important criterion to find the quality of a surface It is an important response parameter In machining process various parameters are

Input Parameters  
Cutting speed  
Feed rate  
Depth of cut  
Insert radius  
Cutting fluid etc

Output Parameters  
surface roughness  
Tool life and  
machining time
