The features of these various tractors are described briefly in this section. Detailed descriptions will be found in the appropriate sections of this manual.

ENGINE

The 445 Tractor is powered by a four cylinder overhead valve engine with a displacement of 206.5 cubic inches. The engine has precision type connecting rod and main bearing inserts. Oil under full pressure is supplied by a gear type oil pump to the main bearings, connecting rod bearings, front and intermediate camshaft bearings, rocker arm assemblies, and the necessary shaft. The remainder of the engine is lubricated by a splash system. The crankcase oil is filtered through a replaceable cartridge, full-flow type oil filter. The crankcase is vented through a breather on the top of the rocker arm cover. The engine speed is regulated by a Flavi-Hyball type governor mounted on the front of the crankshaft, and completely enclosed in the engine crankcase.
