Communications in Interference Limited Networks Wolfgang Utschick,2016-02-04 This book offers means to handle interference as a central problem of operating wireless networks It investigates centralized and decentralized methods to avoid and handle interference as well as approaches that resolve interference constructively The latter type of approach tries to solve the joint detection and estimation problem of several data streams that share a common medium In fact an exciting insight into the operation of networks is that it may be beneficial in terms of an overall throughput to actively create and manage interference Thus when handled properly mixing of data in networks becomes a useful tool of operation rather than the nuisance as which it has been treated traditionally With the development of mobile robust ubiquitous reliable and instantaneous communication being a driving and enabling factor of an information centric economy the understanding mitigation and exploitation of interference in networks must be seen as a centrally important task
