**Mining, the Environment, and Indigenous Development Conflicts** Saleem H. Ali,2009-08-01 From sun baked Black Mesa to the icy coast of Labrador native lands for decades have endured mining ventures that have only lately been subject to environmental laws and a recognition of treaty rights Yet conflicts surrounding mining development and indigenous peoples continue to challenge policy makers This book gets to the heart of resource conflicts and environmental impact assessment by asking why indigenous communities support environmental causes in some cases of mining development but not in others Saleem Ali examines environmental conflicts between mining companies and indigenous communities and with rare objectivity offers a comparative study of the factors leading to those conflicts Mining the Environment and Indigenous Development Conflicts presents four cases from the United States and Canada the Navajos and Hopis with Peabody Coal in Arizona the Chippewas with the Crandon Mine proposal in Wisconsin the Chipewyan Inuits D n and Cree with Cameco in Saskatchewan and the Innu and Inuits with Inco in Labrador These cases exemplify different historical relationships with government and industry and provide an instance of high and low levels of Native resistance in each country Through these cases Ali analyzes why and under what circumstances tribes agree to negotiated mining agreements on their lands and why some negotiations are successful and others not Ali challenges conventional theories of conflict based on economic or environmental cost benefit analysis which do not fully capture the dynamics of resistance He proposes that the underlying issue has less to do with environmental concerns than with sovereignty which often complicates relationships between tribes and environmental organizations Activist groups he observes fail to understand such tribal concerns and often have problems working with tribes on issues where they may presume a common environmental interest This book goes beyond popular perceptions of environmentalism to provide a detailed picture of how and when the concerns of industry society and tribal governments may converge and when they conflict As demands for domestic energy exploration increase it offers clear guidance for such endeavors when native lands are involved

**Mining, the Environment, and Indigenous Development Conflicts** Saleem H. Ali,2009-08-01 From sun baked Black Mesa to the icy coast of Labrador native lands for decades have endured mining ventures that have only lately been subject to environmental laws and a recognition of treaty rights Yet conflicts surrounding mining development and indigenous peoples continue to challenge policy makers This book gets to the heart of resource conflicts and environmental impact assessment by asking why indigenous communities support environmental causes in some cases of mining development but not in others Saleem Ali examines environmental conflicts between mining companies and indigenous communities and with rare objectivity offers a comparative study of the factors leading to those conflicts Mining the Environment and Indigenous Development Conflicts presents four cases from the United States and Canada the Navajos and Hopis with Peabody Coal in Arizona the Chippewas with the Crandon Mine proposal in Wisconsin the Chipewyan Inuits D n and Cree with Cameco in Saskatchewan and the Innu and Inuits with Inco in Labrador

These cases exemplify different historical relationships with government and industry and provide an instance of high and low levels of Native resistance in each country. Through these cases Ali analyzes why and under what circumstances tribes agree to negotiated mining agreements on their lands and why some negotiations are successful and others not. Ali challenges conventional theories of conflict based on economic or environmental cost benefit analysis which do not fully capture the dynamics of resistance. He proposes that the underlying issue has less to do with environmental concerns than with sovereignty which often complicates relationships between tribes and environmental organizations. Activist groups he observes fail to understand such tribal concerns and often have problems working with tribes on issues where they may presume a common environmental interest. This book goes beyond popular perceptions of environmentalism to provide a detailed picture of how and when the concerns of industry, society and tribal governments may converge and when they conflict. As demands for domestic energy exploration increase it offers clear guidance for such endeavors when native lands are involved.

**State Governance of Mining, Development and Sustainability** Tracy-Lynn Field, 2019 States in mineral rich jurisdictions must promote mining as a development industry just as they must protect people and environment from the worst excesses of extractivism. State Governance of Mining, Development and Sustainability explores how the State's role in facilitating a developmental and sustainable mining industry has been defined. In doing so this astute book considers the impact of the policies and laws of mineral rich States themselves, multilateral international governance institutions, industry associations and environmental justice advocates in the areas of property relations, mineral taxation, environmental management and mine closure.

*International Environmental Law and the Global South* Shawkat Alam, Sumudu Atapattu, Carmen G. Gonzalez, Jona Razzaque, 2015-09-17 Situating the global poverty divide as an outgrowth of European imperialism this book investigates current global divisions on environmental policy.

**Mining North America** John R. McNeill, George Vrtis, 2017-07-11 Over the past five hundred years North Americans have increasingly turned to mining to produce many of their basic social and cultural objects. From cell phones to cars and roadways, metal pots to wall tile and even talcum powder, mineral intensive products have become central to modern North American life. As this process has unfolded, mining has also indelibly shaped the natural world and North Americans' relationship with it. Mountains have been honeycombed, rivers poisoned and forests leveled. The effects of these environmental transformations have fallen unevenly across North American societies. Mining North America examines these developments. Drawing on the work of scholars from Mexico, the United States and Canada, this book explores how mining has shaped North America over the last half millennium. It covers an array of minerals and geographies while seeking to draw mining into the core debates that animate North American environmental history generally. Taken together the authors' contributions make a powerful case for the centrality of mining in forging North American environments and societies.
