Choosing and Using a Refracting Telescope Neil English, 2010-09-28 Choosing and Using a Refracting Telescope has been written for the many amateur astronomers who already own or are intending to purchase a refracting telescope perhaps to complement their existing arsenal of larger reflecting telescopes or for the specialist who requires a particular refractor for serious astronomical applications or nature studies Four hundred year ago during the winter of 1609 a relatively unknown Italian scientist Galileo Galilei designed a spyglass with two crude lenses and turned it skyward Since then refractors have retained their dominance over all types of reflector in studies of the Moon planets and double stars because of the precision of their optics and lack of a central obstruction in the optical path which causes diffraction effects in all commercially made reflectors Most mature amateur astronomers got started with a 60mm refractor or something similar Thirty years ago there was little choice available to the hobbyist but in the last decade long focus crown flint achromats have moved aside for some exquisitely crafted apochromatic designs offered by leading commercial manufacturers There has been a huge increase in the popularity of these telescopes in the last few years led by a significant increase in the number of companies particularly William Optics Orion USA StellarVue SkyWatcher and AstroTech who are now heavily marketing refractors in the amateur astronomical magazines In Choosing and Using a Refracting Telescope well known observer and astronomy writer Neil English celebrates the remarkable history and evolution of the refracting telescope and looks in detail at the instruments their development and their use A major feature of this book is the way it compares not only different classes of refractor but also telescopes of each class that are sold by various commercial manufacturers The author is perhaps uniquely placed to do this having used and tested literally hundreds of different refracting telescopes over three decades Because it includes many diverse subjects such as imaging with consumer level digital cameras imaging with webcams and imaging with astronomical CCD cameras that are not covered together in equal depth in any other single volume Choosing and Using a Refracting Telescope could become the refractor bible for amateur astronomers at all levels especially those who are interested in imaging astronomical objects of every class **The Compact and Digital Camera**
