Missile Flight Simulation By Jeffrey Strickland:

Missile Flight Simulation Jeffrey Strickland, 2015 A missile flight simulation is a computational tool that calculates the flight of a missile from launch until it engages the target The simulation is based on mathematical models of the missile target and environment This book provides instruction for the preparation of these mathematical models to simulate the flight of a surface to air missile The 2nd Edition of Missile Flight Simulation provides updated simulation processes using MATLAB R and Simulink TM while improving and clarifying previous content The book may be used as a reference or as a textbook although it is devoid of exercises However the reader is encouraged to perform the simulation of Chapter 12 using MATLAB R and Simulink TM or a programming language such as FORTRAN see Chapter 10 The book is not intended to be a missile flight engineering reference and does not contain every aspect of missile flight It provides the appropriate content for simulating missile flight from launch to terminus only
