## **Mitigation Of Hazardous Comets And Asteroids:**

*Mitigation of Hazardous Comets and Asteroids* M. J. S. Belton, 2004-09-06 It is known that large asteroids and comets can collide with the Earth with severe consequences Although the chances of a collision in a person's lifetime are small collisions are a random process and could occur at any time This book collects the latest thoughts and ideas of scientists concerned with mitigating the threat of hazardous asteroids and comets It reviews current knowledge of the population of potential colliders including their numbers locations orbits and how warning times might be improved The structural properties and composition of their interiors and surfaces are reviewed and their orbital response to the application of pulses of energy is discussed Difficulties of operating in space near or on the surface of very low mass objects are examined The book concludes with a discussion of the problems faced in communicating the nature of the impact hazard to the public Comet/Asteroid Impacts and Human Society Peter T. Bobrowsky, Hans Rickman, 2007-06-10 Leading specialists in various disciplines were first invited to a multidisciplinary workshop funded by ICSU on the topic to gain a better appreciation and perspective on the subject of comet asteroid impacts as viewed by different disciplines This volume provides a necessary link between various disciplines and comet asteroid impacts Assessment and Mitigation of Asteroid Impact Hazards Josep M. Trigo-Rodríguez, Maria Gritsevich, Herbert Palme, 2016-12-19 This volume is a compilation of the research presented at the International Asteroid Day workshop which was celebrated at Barcelona on June 30th 2015 The proceedings discuss the beginning of a new era in the study and exploration of the solar system's minor bodies International Asteroid Day commemorates the Tunguska event of June 30th 1908 The workshop's goal was to promote the importance of dealing proactively with impact hazards from space Multidisciplinary experts contributed to this discussion by describing the nature of comets and asteroids along with their offspring meteoroids New missions to return material samples of asteroids back to Earth such as Osiris REx and Hayabusa 2 as well as projects like AIM and DART which will test impact deflection techniques for Potentially Hazardous Asteroids encounters were also covered The proceedings include both an outreach level to popularize impact hazards and a scientific character which covers the latest knowledge on these topics as well as offering proposals of promising new techniques that will help gain new insights of the properties of these challenging bodies by studying meteoroids and meteorites Asteroids comets meteoroids and meteorites are introduced with descriptions of their nature origin and solar system pathways Asteroids IV Patrick Michel, Francesca E. DeMeo, William F. Bottke, 2015-12-31 More than forty chapters detail our current astronomical compositional geological and geophysical knowledge of asteroids as well as their unique physical processes and interrelationships with comets and meteorites Provided by publisher Spaceflight Mechanics 2012 James V. **Vehicle Dynamics and Control** Bong Wie, 2008 Space Vehicle Dynamics and Control Second Edition continues to provide a solid foundation in dynamic modeling analysis and control of space vehicles featuring detailed sections covering the fundamentals of controlling orbital attitude and structural motions of space vehicles A new Part 5 is a collection of advanced spacecraft control problems and their practical solutions obtained by applying the fundamental principles and techniques emphasized throughout the book

**New Trends in Astrodynamics and Applications III** Edward Belbruno, 2007-03-09 This book contains peer reviewed papers from New Trends in Astrodynamics and Applications III an international conference held in August 2006 in Princeton NJ This conference presented current research in the field of astrodynamics with a special emphasis on the use of the methods of chaos theory and dynamical systems to find low energy trajectories The volume provides applications to current and future space missions and dynamical astronomy

*Impact Hazard Mitigation*, 2009 The NASA 2007 white paper Near Earth Object Survey and Deflection Analysis of Alternatives affirms deflection as the safest and most effective means of potentially hazardous object PHO impact prevention It also calls for further studies of object deflection In principle deflection of a PHO may be accomplished by using kinetic impactors chemical explosives gravity tractors solar sails or nuclear munitions Of the sudden impulse options nuclear munitions are by far the most efficient in terms of yield per unit mass launched and are technically mature However there are still significant questions about the response of a comet or asteroid to a nuclear burst Recent and ongoing observational and experimental work is revolutionizing our understanding of the physical and chemical properties of these bodies e g Ryan 2000 Fujiwara et al 2006 and Jedicke et al 2006 The combination of this improved understanding of small solar system bodies combined with current state of the art modeling and simulation capabilities which have also improved dramatically in recent years allow for a science based comprehensive study of PHO mitigation techniques Here we present an examination of the effects of radiation from a nuclear explosion on potentially hazardous asteroids and comets through Monte Carlo N Particle code MCNP simulation techniques MCNP is a general purpose particle transport code commonly used to model neutron photon and electron transport for medical physics reactor design and safety accelerator target and detector design and a variety of other applications including modeling the propagation of epithermal neutrons through the Martian regolith Prettyman 2002 It is a massively parallel code that can conduct simulations in 1 3 dimensions complicated geometries and with extremely powerful variance reduction techniques It uses current nuclear cross section data where available and fills in the gaps with analytical models where data are not available MCNP has undergone extensive verification and validation and is considered the gold standard for particle transport Forrest B Brown et al MCNP Version 5 Trans Am Nucl Soc 87 273 November 2002 Additionally a new simulation capability using MCNP has become available to this collaboration The first results of this new capability will also be presented

**Astrodynamics, Space Missions, and Chaos** Edward Belbruno, David Folta, Pini Gurfil, 2004 The subject of astrodynamics is of particular interest at this critical juncture for space projects in the wake of the

Columbia disaster This volume based on a conference sponsored by NASA and Princeton University comprises papers on the applications of chaos and dynamical systems including considerations of asteroid pairs near Earth objects and asteroidal dust formation flying optimization guidance and control systems mission design orbit dynamics and propulsion including material on NASA's major initiative Project Prometheus The volume is also of value to mathematicians for its discussion of chaos related issues to astronomers astrodynamacists and planetary geologists for its blueprint for the methodology of future space exploration and to engineers for its discussion of innovations in space propulsion systems It is also a must read for commercial economic and military policymakers Taking Sides Science, Technology, and Society Thomas A.

**Astronomical Odds** Geoffrey Sommer,2005 Addresses the cosmic impact hazard the threat to the Earth posed by asteroids and comets as an extreme example of a low probability high consequence policy problem This analysis presents a comprehensive framework for dealing with the technical and societal uncertainties surrounding the impact hazard It reviews the physical nature of the threat and both the history and mechanisms of society's response to the hazard dwelling on the social costs of false positives The author constructs an illustrative cost benefit model on the foundations of prior work with parameters of social response added and then varied to assess the robustness of a proposed policy intervention social reassurance by means of a demonstrated mitigation capability He concludes by noting that a common flaw of prior analysis is to give lip service to low probability and to focus instead on high consequence that there is frequent confusion between ex ante and ex post perspectives that uncertain costs are often treated as nonexistent costs and that warning is a social function not a technical function and those who issue warnings of a given hazard should not stand to benefit from those warnings

**Aerospace America** ,2003 **Governance of Earth Systems** Robert Boardman,2010-07-07 Science and politics are closely connected in today's global environmental issues This book focuses on these links in relation to climate change the threats to wildlife species and natural hazards and disasters Close study of these links of these reveals the need for more effective international cooperation and the limits of global governance Meteorite! ,2007 **Defending Planet Earth** National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Space Studies Board,Committee to Review Near-Earth-Object Surveys and Hazard Mitigation Strategies,2010-06-21 The United States spends approximately 4 million each year searching for near Earth objects NEOs The objective is to detect those that may collide with Earth The majority of this funding supports the operation of several observatories that scan the sky searching for NEOs This however is insufficient in detecting the majority of NEOs that may present a tangible threat to humanity A significantly smaller amount of funding supports ways to protect the Earth from such a potential collision or mitigation In 2005 a Congressional mandate called for NASA to detect 90 percent of NEOs with diameters of 140 meters of

greater by 2020 Defending Planet Earth Near Earth Object Surveys and Hazard Mitigation Strategies identifies the need for detection of objects as small as 30 to 50 meters as these can be highly destructive The book explores four main types of mitigation including civil defense slow push or pull methods kinetic impactors and nuclear explosions It also asserts that responding effectively to hazards posed by NEOs requires national and international cooperation Defending Planet Earth Near Earth Object Surveys and Hazard Mitigation Strategies is a useful guide for scientists astronomers policy makers and engineers     *The Moon and Near-earth Objects* Pascale Ehrenfreund, Bernard H.
