**Sacred Knowledge** William A. Richards, 2015-12-08 Sacred Knowledge is the first well documented sophisticated account of the effect of psychedelics on biological processes human consciousness and revelatory religious experiences Based on nearly three decades of legal research with volunteers William A Richards argues that if used responsibly and legally psychedelics have the potential to assuage suffering and constructively affect the quality of human life Richards s analysis contributes to social and political debates over the responsible integration of psychedelic substances into modern society His book serves as an invaluable resource for readers who whether spontaneously or with the facilitation of psychedelics have encountered meaningful inspiring or even disturbing states of consciousness and seek clarity about their experiences Testing the limits of language and conceptual frameworks Richards makes the most of experiential phenomena that stretch our understanding of reality advancing new frontiers in the study of belief spiritual awakening psychiatric treatment and social well being His findings enrich humanities and scientific scholarship expanding work in philosophy anthropology theology and religious studies and bringing depth to research in mental health psychotherapy and psychopharmacology

**Acute Religious Experiences** Richard Saville-Smith, 2023-02-09 This book engages the problem of how in the 21st century we are to speak about experiences of the extraordinary anomalous extreme which occur on a transhistorical and transcultural basis Critical re readings of seminal texts show how 20th century theoreticians in the humanities sought to erase madness from their irrational subjects This propensity to sanitize madness in the study of religions was mirrored by the instinct of psychiatrists to degrade religious experiences by reducing mad consciousness to psychosis or dissociation Richard Saville Smith introduces explanatory pluralism as a way of recognizing these disciplinary biases and mad studies as a way of negotiating this understanding The disproportionate significance of madness in shaping the fabric of the human story can then be recovered from both erasure and dismissal to be given the recognition previously denied as acute religious experiences Acute Religious Experiences divides into three sections beginning with re readings of William James s pathological programme Rudolf Otto s numinous T K Oesterreich s possession Mircea Eliade s shamanism Walter Stace s mysticism Walter Pahnke s psychedelic experience and Abraham Maslow s peak experiences These ideas are shown to constitute the beginnings of a fractured discourse on the irrational In part two contemporary psychiatry s Diagnostic and Statistical Manual DSM and Foucault s History of Madness are re read to reposition madness as not necessarily pathological This opens the way for the identification of acute religious experiences as a new holistic and post colonial approach through which religious data can be organized and addressed on a comparative basis In part three The Gospel of Mark is re read as a case study to demonstrate the novel insights which flow from the identification of acute religious experiences Richard Saville Smith draws on his own experiences of madness and his PhD from the School of Divinity at The University of Edinburgh to elucidate his research

*Religious Experience and Christian Faith* Frederick William Dillistone,1981 Dr Dillistone looks at the careers of five pairs of men born in this period all eminent in some department of the arts or the sciences In the case of each pair there has been the sharing of a common interest and a common discipline yet in the case of religion and the interpretation of religious experience there has been a contrast

*Where God and Science Meet* Patrick McNamara Ph.D.,2006 In this far reaching and novel work experts from across the nation and around the world present evolutionary neuroscientific and psychological approaches to explaining and exploring religion including the newest findings and evidence that have spurred the fledgling field of neurotheology Spiritual practices or awakenings have an impact on brain mind and personality These changes are being scientifically predicted and proven For example studies show Buddhist priests and Franciscan nuns at the peak of religious feelings show a functional change in the lobes of their brain Similar processes have been found in people with epilepsy which Hippocrates called the sacred disease New research is showing that not only does a person s brain activity change in particular areas while that person is experiencing religion epiphany but that such events can be created for some people even self professed atheists by stimulating various parts of the brain It is not the goal of neurotheology to prove or disprove the existence of God but to understand the biology of spiritual experiences Such experiences seem to exist outside of time and space caused by the brain losing its perception of a boundary between physical body and outside world Understanding why this is the case could help explain other intangible events such as altered states of consciousness possession supposed alien visitations near death experiences and out of body events Understanding how and why these abilities evolved in the brain could also help us understand how religion contributes to the survival of the human race
