*Realistic Simulation of Financial Markets* Hajime Kita, Kazuhisa Taniguchi, Yoshihiro Nakajima, 2016-07-06 This book takes up unique agent based approaches to solving problems related to stock and their derivative markets Toward this end the authors have worked for more than 15 years on the development of an artificial market simulator called U Mart for use as a research and educational tool A noteworthy feature of the U Mart simulator compared to other artificial market simulators is that U Mart is an ultra realistic artificial stock and their derivative market simulator For example it can simulate arrowhead a next generation trading system used in the Tokyo Stock Exchange and other major markets as it takes into consideration the institutional design of the entire market Another interesting feature of the U Mart simulator is that it permits both human and computer programs to participate simultaneously as traders in the artificial market In this book first the details of U Mart are explained enabling readers to install and run the simulator on their computers for research and educational purposes The simulator thus can be used for gaming simulation of the artificial market and even for users as agents to implement their own trading strategies for agent based simulation ABS The book also presents selected research cases using the U Mart simulator Here topics include automated acquisition of trading strategy using artificial intelligence techniques evaluation of a market maker system to treat thin markets such as those for small and regional businesses systemic risk analysis of the financial market considering institutional design of the market and analysis of how humans behave and learn in gaming simulation New perspectives on artificial market research are provided and the power potential and challenge of ABS are discussed As explained in this important work ABS is considered to be an effective tool as the third approach of social science an alternative to traditional literary and mathematical approaches

**Financial Market Design by an Agent-Based Model** Takanobu Mizuta, Isao Yagi, 2025-02-10 This is the first book to focus on designing a financial market that works well and that includes making and or modulating detailed regulations and or rules by a computer simulation of an agent based artificial financial market model ABAFMM The design of a financial market is very important for the development and maintenance of an advanced economy but designing it is not easy because changes in detailed rules even those that seem trivial sometimes have unexpectedly large impacts and side effects in a financial market which is a complex system Traditional economics cannot treat a financial market as a complex system in which micro macro interaction and feedback loops have played essential roles because traditional economics can only treat macrophenomena and micro processes separately ABAFMM can do it however This book explains first why ABAFMMs are needed to design financial markets and which models have good features Following that explanation the book discusses how to build the models Then cases of recent studies and their contributions are shown and finally the difficulties of researchers in this field are considered This book is expected to facilitate the design of more ABAFMMs to contribute to creating financial markets that will further develop and maintain advanced economies
