Connecting Electric Vehicle Charging Infrastructure to Commercial Buildings, 2023. Electric vehicles (EVs) are growing in popularity and gaining meaningful market share with record sales year over year. In the last decade, EV charging equipment, also known as EV chargers (EVC) or EV supply equipment (EVSE), must proportionally match the growing number of new EVs on the road for a comparable experience to gas-powered vehicles. The majority of EV charging currently happens at residential buildings. However, demand for EV charging at commercial buildings will significantly increase with wider mainstream EV adoption and as businesses return to more normal operation following the COVID-19 pandemic disruptions. Charging equipment can include various sub-systems like power conditioning, module control software, safety devices, metering, communication, cooling connectors, and wiring. EV charging at commercial buildings could be used for public workplace and commercial fleet charging.
