Other Patterns of Inheritance

Objectives:

- Describe the other patterns of inheritance beyond dominant and recessive alleles
- Do (submit) square practice problems for other patterns of inheritance

Beyond Dominant and Recessive Alleles

Some alleles are neither dominant nor recessive. In cases of **incomplete dominance** neither allele is completely dominant over the other. The phenotype is a result of the two heterozygous phenotypes. A pink rose is an example of the product of incomplete dominance. The allele for white is not dominant over the color for red thus resulting in a blending result of pink.

In cases of **codominance**, both alleles in the heterozygous genotype are expressed in the phenotype. In the diagram to the right, a black bull and a white cow reproduce to produce a spotted dark cow. Both white and black alleles are expressed. There is no blending or blending.

Genes with **multiple alleles** have more than two forms of the same gene. There are no more than one dominant form and several different phenotypes. Human blood type is an example of multiple alleles where one gene is
