ABD Promos , 2012 *The Antecedents and Consequences of Promo Code Redemptions* Scott Neslin, Wenyu Jiao, 2021 Promo code coupons delivered via email are a popular promotion tool We study the effectiveness of these promotions by examining the factors that influence

consumers to redeem promo codes and the impact of redemptions on profits We analyze a field experiment conducted by a national retailer involving more than 400 000 customers We study the open click redemption process using a five equation model for opens clicks and three purchase types 1 eligible redemptions 2 eligible non redemptions and 3 ineligible and hence non redemption purchases We find consumers motivations and abilities have a sequential impact they determine opens which expose them to the promo code and hence the opportunity to redeem and then determine which type of purchase consumers make Eligible non redemptions represent slippage whereby consumers purchase but do not redeem although they could have We find that customers with relatively low motivation and ability are associated with slippage providing a sensible explanation of slippage We find promo code coupons induce purchase acceleration undoubtedly due to their limited duration but are still profitable after accounting for acceleration We conclude managers should consider using emailed promo code promotions their dependence on customer motivation and ability means firms can target customers to effect price discrimination
