**Neighborhood Team Policing** Peter B. Bloch, David Specht, 1973 Prescriptive package detailing theoretical guidelines and practical methods for designing, implementing, and administering a neighborhood team policing program. The concept of decentralizing police decisionmaking authority to meet increasing demands on law enforcement services is featured in this NILECJ prescriptive package. A practical guide for police administrators and planners, this manual provides a method of organizing operations to improve police-community relations, increase crime control effectiveness, and enhance police job satisfaction. Chapter 1 is a summary of current knowledge about neighborhood team policing and a description of what the authors believe would be an ideal neighborhood team policing system. Chapter 2 describes the neighborhood team policing programs of several police departments. Subsequent chapters suggest procedures for planning and implementing neighborhood team policing, administering an ongoing program, providing training and education, and establishing lines of authority and methods of supervision of neighborhood teams. A practical approach for constructing a project budget is presented. Appendices include suggested operational guidelines, a format for team commander reports, a model proposal to obtain LEAA action funds, a case study of one team in New York City, a way of organizing a referral guide for use by police officers, and a description of a training program implemented in St. Petersburg, Florida.

**Statistical Process Control and Data Analytics** John Oakland, Robert Oakland, 2024-09-02 The business, commercial, and public sector world has changed dramatically since John Oakland wrote the first edition of Statistical Process Control in the mid 1980s. Then, people were rediscovering statistical methods of quality control and the book responded to an often desperate need to find out about the techniques and use them on data. Pressure over time from organizations supplying directly to the consumer, typically in the automotive and high technology sectors, forced those in charge of the supplying production and service operations to think more about preventing problems than how to find and fix them. Subsequent editions retained the tool kit approach of the first but included some of the philosophy behind the techniques and their use. Now entitled Statistical Process Control and Data Analytics, this revised and updated eighth edition retains its focus on processes that require understanding, have variation, must be properly controlled, have a capability, and need improvement, as reflected in the five sections of the book. In this book, the authors provide not only an instructional guide for the tools but communicate the management practices which have become so vital to success in organizations throughout the world. The book is supported by the authors' extensive consulting work with thousands of organizations worldwide. A new chapter on data governance and data analytics reflects the increasing importance of big data in today's business environment. Fully updated to include real life case studies, new research based on client work from an array of industries, and integration with the latest computer methods and software, the book also retains its valued textbook quality through clear learning objectives and online end of chapter discussion questions. It can still serve as a textbook for both student and practicing engineers, scientists, technologists, managers, and anyone wishing to understand
